ACACT 202(3) Course ID:013001 01-JAN-2017

Introductory Accounting II

Prerequisite: ACACT 201 Introductory Accounting I

This course highlights the differences between financial accounting and managerial accounting. The course begins by completing the study of transactions and events affecting financial statements. The cash flow statement is then explored in some detail. Finally, financial statement analysis as traditionally practiced, is considered a capstone for financial accounting. The course then focuses on the use of accounting data by management. Product costing in a manufacturing setting, assigning of costs to objects, learning how costs behave, and the use of accounting data by management in planning operations, controlling operations, and in short term decision making are all investigated.

Components: Lecture(In person)**Course Equivalent:** ACCT 202H, ACCT 202**Requirement Group:** Prerequisite: ACACT 201/ ACMAT 117**Room Requirements:** Electronic Classroom(1)

Business Analytics

Business analytics is the practice of using methodically collected data to drive decisions about business and in business applications. The goal of the course is to introduce students to the current approaches, tools, and techniques involved in this practice. Because many topics and concepts in business analytics are best learned through hands-on work, time will be spent obtaining, processing, analyzing and visualizing data that pertain to different business cases. Students will use R, arguably the most popular analytical software used by data scientists. During this course, students will learn to use R, as well as gain and help improve business insight through data-driven analytics.

Derivative Securities

Prerequisite: FINC 450

This course is an introduction to options, futures, forwards and swaps as derivative securities. After an overview of these securities, a detailed examination of the methods of valuing options will be presented. Binomial trees and a discussion of the Black-Scholes option pricing model will be emphasized, followed by insights into option contracts as useful risk management instruments. A brief introduction to stochastic calculus is also given. Stock, index, debt, commodity, foreign currency and futures options are reviewed, and option strategies are analyzed as managerial tools in financial decision-making. Skills developed in this course include analytical and decision-making, creative thinking and communication. Throughout the course the notion of risk both as potential loss and opportunity for gain and its management will be highlighted.

Topics in Derivative Securities

Prerequisite: FINC 622 or ECON 622

This course builds on FINC 622 and extends the analysis of derivatives by focusing on futures and swaps. It also builds on the previous study of options, particularly by illustrating the power of lattice methods. The course is designed to give a better understanding of how to actually work with and price derivatives. Financial derivatives are complicated and controversial instruments that are often misunderstood by the broader public and that come under frequent attack (some surely deserved). An aim of this course is to build a better understanding of the social function of derivative markets in three ways. First, we consider the social

function of derivatives explicitly; second, we focus on the role of derivatives in the recent (or still

 Prerequisite: FINC 450

This course explores the emerging practice of "enterprise risk management" (ERM) or "integrated risk management"-a new managerial outlook on managing risk. Enterprise risk management considers all the risks faced by the firm and attempts to integrate these disparate risks into a single unified analytical framework. Traditionally, risk has been managed in the compartments of financial risk, operating risk, and credit risk. Rather than allowing risk to remain in such "silos," ERM insists that these must be brought together into one system of risk management.

Derivative Securities

Prerequisite: FINC 450

This course is an introduction to options, futures, forwards and swaps as derivative securities. After an overview of these securities, a detailed examination of the methods of valuing options will be presented. Binomial trees and a discussion of the Black-Scholes option pricing model will be emphasized, followed by insights into option contracts as useful risk management instruments. A brief introduction to stochastic calculus is also given. Stock, index, debt, commodity, foreign currency and futures options are reviewed, and option strategies are analyzed as managerial tools in financial decision-making. Skills developed in this course include analytical and decision-making, creative thinking and communication. Throughout the course the notion of risk both as potential loss and opportunity for gain and its management will be highlighted.

Topics in Derivative Securities

Prerequisite: FINC 622 or ECON 622.

This course builds on FINC 622 and extends the analysis of derivatives by focusing on futures and swaps. It also builds on the previous study of options, particularly by illustrating the power of lattice methods. The course is designed to give a better understanding of how to actually work with and price derivatives. Financial derivatives are complicated and controversial instruments that are often misunderstood by the broader public and that come under frequent attack (some surely deserved). An aim of this course is to build a better understanding of the social function of derivative markets in three ways. First, we consider the social

function of derivatives explicitly; second, we focus on the role of derivatives in the recent (or still

Ethics, Economics & Entrepreneurship

Prerequisite: Junior Standing, 'C-' or better in MGMT 201

The entrepreneur has been reviled as a social parasite and cheered as a moral hero. Through an examination of some classic works on entrepreneurship and the writings of our guest speakers, in Ethics, Economics, and Entrepreneurship we will take up three main questions:

Who is the entrepreneur; that is, what activities or characteristics make one an entrepreneur?

Why did the entrepreneur largely disappear from intellectual discourse in the middle 20th century?

How ought we to evaluate the entrepreneur morally; and does the answer depend upon who we understand the entrepreneur to be?

Business Strategy
This course analyzes the responsibilities of general management in formulating, communicating, and implementing a strategic plan. Whereas corporate strategy (MGMT 574) defines the vertical and horizontal scope of a firm, business strategy (MGMT 573) is concerned with how the firm generates and sustains competitive advantage within a particular industry or product market. Students will develop executive and general management skills through an understanding of how the various functions of an organization operate as a whole. Through case studies, students will also build their skills in conducting strategic analyses in a variety of industries and competitive situations and gain a stronger understanding of the challenges of the business environment.
Components: Lecture(In person)

AFR 304(3) Course ID:009885 03-MAY-2016**Research Methods in Black World Studies**

Chicago has a growing number of newly formed communities whose ancestors are/were African. Among such populations are Cuban, Haitian, Nigerian, Belizean, and Jamacian peoples. These neo-African communities in Chicago tend to cluster in patterns related to available housing, ethnicity and natality. Many factors including language barriers, educational and employment disadvantages as well as cultural ubiquity often leave these newcomers' needs unattended. This course provides instruction in research methods useful in understanding the social and political needs of such marginalized populations. The primary research model for this course is Participatory Action Research methods.

ANTH 315(3) Course ID:001129 29-JUN-2012
Identities: Race, Ethnicity, and Nationalism
 Prerequisites: ANTH 100 or ANTH 102.

Drawing on case studies, this course examines anthropological understandings of "race," ethnicity, and nationalism.

Outcome: Students will emerge able to understand historical anthropological theories concerning group identities (tribes, race, ethnic groups); the symbolic construction of group identities; the political dimensions of collective identities; dynamics between religion and ethnicity; and the role of colonialism & the state in shaping ethnic relations.

Components: Lecture
Course Equivalents: INTS 314

ANTH 316(3) Course ID:001130 29-JUN-2012
Anthropology of Religion & Ritual
 Prerequisites: ANTH 100 or ANTH 102.

The course considers religion as a form and part of culture. The innovative as well as conservative features of religion in culture change are addressed. Religion's role as both a belief-system and ritual practice are underscored.

Outcome: Students will develop the capacity to view religion in a broad perspective and to understand it as a significant factor of belief and practice in cultural systems.

Components: Lecture
Requirement Group: Prerequisite: ANTH 100 or ANTH 102
Room Requirements: General Classroom(1)

ANTH 317(3) Course ID:001131 01-NOV-2013
Ethnographic Methods
 Prerequisite: ANTH 304 or Instructor approval

This course is designed to offer an introduction to qualitative methods in anthropology. Students will learn methodologies such as participant observation, interviewing, and document analysis, and we will also address ethical issues in field research. Students will design and carry out an ethnographic research project.

Outcomes: Students will: demonstrate in-depth knowledge of qualitative research techniques; critically discuss ethical implications of ethnographic research; undertake original ethnographic fieldwork; prepare a comprehensive, theoretically informed, and clearly written report based on original ethnographic data.

Components: Field Studies(In person)
Attributes: Engaged Learning, Urban Studies
Requirement Group: Prerequisite: ANTH 304 or Instructor's Permission

Prerequisites: PSYC 101 or BIOL 101; Biology Majors: BIOL 102 & 112.

This course will introduce students to basic concepts and the variety of topics in the field of neuroscience, including neuroanatomy (gross and cellular), physiology, neural basis of behavior, malfunctions due to disease and injury, and methods used to study these areas; laying a foundation for advanced coursework in neuroscience. BIOL 202 is cross-listed with PSYC 202.

Outcomes: Knowledge of the organization of the nervous system, cellular events that underlie emotions, learning, and behavior, and awareness of classical and modern methods for advancing the field.

Components: Lecture(In person)**Course Equivalents:** PSYC 202**Attributes:** Neuroscience**Requirement Group:** Prerequisites: PSYC 101 or BIOL 101; For Biology Majors: BIOL 102 & 112.**Room Requirements:** Electronic Classroom(1)**BIOL 205(4) Course ID:001295 15-MAR-2006****Plant Biology Lect/Lab**

Prerequisites: BIOL 102, 112.

Lecture and laboratory. Survey of the principles of botany including development and reproduction, structure, phylogeny and metabolism.

Outcome: Students will understand the basic morphology of plants; utilize morphology in the identification of local plants; understand the anatomy of plants; understand the relationship between anatomy and basic physiology; recognize that differences in physiological function allow different plants to be found in specific environments; appreciate the diversity of organisms called plants.

Components: Laboratory, Lecture**Requirement Group:** Pre-requisite: BIOL 102 and 112.**Room Requirements:** General Classroom(1)**BIOL 209(3) Course ID:009894 15-JUN-2015****Clinical Microbiology**

BIOL 209 is a non-majors course designed for and restricted to Nursing students only. It does not count toward the Biology major nor minor credit. This course will examine biological determinants of health and illness. Basic biological concepts of evolution, classification, ecology and genetics will be studied in order to understand effects on human health for individuals, families and communities. The importance of Microorganisms to health and illness will be emphasized.

Components: Lecture(In person)**Requirement Group:** Prerequisite: BIOL 153**Room Requirements:** Electronic Classroom(1)**BIOL 210(2) Course ID:009680 03-APR-2008****Laboratory Techniques**

Lab sessions designed to prove a firm foundation in basic techniques and procedures, use of equipment and apparatus; keeping a lab notebook and in data collection and treatment.

Outcome: Students will acquire basic skills needed to work in a research laboratory.

Human Structure and Function I
Prerequisite: BIOL 102, 112; CHEM 102, 112 or 106.

Lecture, laboratory, and demonstrations. Organization of the human body from the cellular to the organismal level. Anatomy of body systems and their physiology related to 1) support and movement (integumentary, skeletal and muscular systems) and integration and control (nervous and endocrine systems). Dissection of representative organs is required. Prerequisites are BIOL 101, 102, 111,112 and CHEM 101, 102, 111, 112.

Outcomes: Students will be able to demonstrate knowledge of human anatomy at the microscopic and gross levels. They will be able to correlate structure and function and will have a firm understanding of the organizing principle of human physiology, homeostasis and explain the role of the nervous and endocrine

Components: Laboratory(In person), Lecture

BIOL 280(3) Course ID:001311 29-JUN-2012

Evolution of Human Disease

Prerequisites: BIOL 102.

Introduces students to the complex interaction between human hosts and pathogens. Begins with an introduction to immunology and discussion and analysis of particular paradigms that strive to model host/pathogen interaction. Using the paradigms, paleopathological and paleodemographic information, students explore the patterns of human diseases throughout prehistory and history. Addresses the role of human biology, human culture, and changing environments.

Genetics

Pre-requisites: BIOL 102, 112; CHEM 102 or 106.

Pre-requisites For Bioinformatics majors ONLY: BIOL 101; CHEM 102 or 106.

This course surveys principles and processes of genetic inheritance, gene expression, molecular biology, developmental, quantitative, population and evolutionary genetics.

Outcome: Students will develop knowledge and awareness of the genetic bases of modern biology. They will understand Mendelian principles of inheritance, chromosome and DNA structure and replication, gene expression, molecular biology, genetic bases of development and other biological processes, and quantitative, population and evolutionary genetics.

Components: Discussion(In person), Lecture

Prerequisite: BIOL 282; BIOL 265 recommended

This course focuses on analysis of processes and patterns of evolution. Topics include population genetic principles, fossil patterns and geologic ages, phylogenetic analysis of relationships of species, experimental approaches to evolutionary questions, and evolutionary perspectives on human biology and relationships.

Outcome: Students will develop knowledge and awareness of evolutionary processes and patterns, the evidence for them, and how evolutionary hypotheses are tested experimentally. They will develop an appreciation of the primary literature through reading and discussing research articles.

Components: Lecture(In person)
Requirement Group: Pre-requisite: Biol 282.

Prerequisites: BIOL 251, 282, 283 and CHEM 222 or 224

Prerequisites for Bioinformatics Majors: BIOL 282 & 283 and CHEM 222 or CHEM 224

This course is an intensive laboratory course in the basic principles and techniques of molecular biology, including bacterial cloning, polymerase chain reaction, restriction mapping, agarose gel electrophoresis, and DNA sequencing.

Outcome: Students will be able to demonstrate basic molecular biology skills including manipulation of bacterial cultures and DNA, plasmid minipreps, gel electrophoresis, cloning, polymerase chain reaction, and other molecular techniques that may be specific to their chosen independent projects.

Components: Laboratory(In person)**Course Equivalents:** BIOI 390**Attributes:** Engaged Learning, Bioinformatics, Neuroscience**Requirement Group:** Prerequisites: BIOL 251, 282, 283 and CHEM 222 or 224 Prerequisites for Bioinformatics Majors: BIOL 2**Req. All Things Ignatian: Living and Learning in the Jesuit Trad

This course explores the founder of the Jesuits, St. Ignatius Loyola and considers his historical context and that of the Jesuits from Renaissance Europe to today. Second, the course will introduce „The Spiritual Exercises,“ a highly refined and adaptable method of prayer, contemplation and action. Finally, the course will examine Ignatian spirituality as a practical resource for for addressing critical issues in the Church and world today.

Outcomes: Describe the life and history of Ignatius of Loyola and the Society of Jesus. Identify and explain the chief characteristics and major themes of Ignatian spirituality. Locate, analyze, and demonstrate Jesuit apostolate of scholarship and teaching; identify the global contribution to education, particularly to university life. Experience direct service.

Introduction to Forensic Drug Chemistry
Pre-requisites: (CHEM 222 or 224) and CHEM 212 & 214; Co-requisite CHEM 316L

This course provides an introduction to the basic principles of forensic drug analysis. The use of microscopic, chemical, and chromatographic techniques to gather data, interpret results and form conclusions are developed. Recognizing the strengths and weaknesses in the techniques used and the correct interpretation of results is stressed.

Outcomes: The techniques, skills, advances and limitations of the modern forensic laboratory discussed. The students will be able to summarize basic concepts of forensic drug analysis, testing, and formal reporting.

Biochemistry Laboratory I

Prerequisite: CHEM 370

This laboratory is designed to simulate a research experience and to teach basic techniques utilized in a biochemistry laboratory. The course theme involves a comparative investigation of the enzyme glyceraldehyde-3-phosphate dehydrogenase (GAPDH) from various animal sources. All procedures required in lab will be found by the student in the library and proposed to the instructor(s) as a pre-lab exercise. Each two-student team will be working on GAPDH from either an aquatic or land animal source, e.g., trout, tuna, pork beef or chicken.

Outcome: Students will be able to purify and characterize an enzyme in a research context.

 Prerequisite: CHEM 371

This laboratory course is designed to simulate a research project in which molecular biology techniques and biochemistry are integrated. Those techniques are used as important tools to help solve questions in enzyme structure and function. The course theme involves an investigation on the relationship between protein structure and function of the ADP-glucose pyrophosphorylase (ADP-Glc PPase) from Escherichia coli. All procedure required in lab will be found by the student in the library and proposed to the instructor(s) as a pre-lab exercise. Each two-student team will be working on a specific ADP-Glc PPase that has been previously obtained in a recombinant form. Their genes will be provided in a plasmid form.

Chemistry Seminar
 Prerequisite: CHEM 222 or 224, and 226.

A weekly seminar course with presentations, generally given by outside speakers, covering topics in chemistry usually not encountered in the classroom.

Outcome: Students will demonstrate their understanding by writing a one page summary of each presentation.

Components: Seminar
Requirement Group: Pre-requisites: CHEM 222 or 224 and 226.
Room Requirements: Auditorium(1)

CHEM 385(3) Course ID:011975 20-JUN-2012
Advanced Enzyme Kinetics and Mechanisms
 Prerequisite: CHEM 370

The major themes in this course will be topics that are related to modern enzymology. The structure of this course will involve lectures by Dr. Ballicora for each topic, and discussion with the students.

Outcome: Students will be able to understand enzyme mechanisms and be able to make oral presentations on recently published articles.

Components: Lecture(In person)
Requirement Group: Prerequisite: CHEM 370. Restricted to Biochemistry Majors
Room Requirements: Electronic Classroom(1)

CHEM 386(3) Course ID:011971 29-JUN-2012
Metabolic Processes & Supermolecular Bio Structures
 Prerequisites: CHEM 371

The emphasis will be on control of pathways and on supermolecular organization of metabolism. The structure of the course will involve lectures by Dr Olsen, and discussion with the students.

Outcome: Students will be able to understand how control of metabolism is achieved and the importance of supermolecular structures in cell function. Students will be able to make oral presentations on recently published articles.

Components: Lecture(In person)

CHEM 387(3) Course ID:011972 20-JUN-2012
Plant Biochemistry
 Prerequisite: CHEM 370

The major themes in this course will be about topics that are related to plant biochemistry and metabolism. The structure of the course will involve lectures for each topic, with discussion with the students. Students will learn how plants and photosynthetic organisms acquire and process energy. Plant metabolism will constitute a central part of the course, focusing on the main differences from other living organisms. A solid understanding of plant metabolism will inspire the student to think about all the possibilities that plant biochemistry and biotechnology offer to solve critical problems, such as malnutrition, global climate change, drug discovery, and infectious diseases.

Introduction to Digital Music

Computers and digital tools have been seeping into the world of music, this course aims to explore this newly formed territory. This course is intended for students who wish to learn more about electronic music, signal processing, and algorithmic music composition.

Prerequisites: MATH 118 or equivalent (COMP 150 is preferred)

Outcomes: Understanding of the physics of musical sound and digital audio, facility with hands-on applications of algorithmic music composition and musicology, and ability to design and render digital instruments.

Components: Lecture(In person)**Course Equivalents:** MUSC 122**Requirement Group:** Prerequisite: Math Placement Test or Math 118**Room Requirements:** Lab - Computer(1)

COMP 125(3) Course ID:002163 01-AUG-2012

Visual Information Processing

This course, intended primarily for non-majors, provides an introduction to computer programming using a language well-suited to beginning programmers and practical applications, e.g., Visual Basic.Net.

Outcome: Understanding of computer mechanisms for representing and analyzing numerical and logical information and the power of programmability; practical ability to implement useful computing tools.

Components: Laboratory(In person)**Attributes:** CORE PRE-2012 Quantitative Reasoning, Quantitative Knowledge**Room Requirements:** Lab - Computer(1)

COMP 150(3) Course ID:002164 01-AUG-2012

Introduction to Computing

The world overflows with electronic data. This course introduces programming in a simple, powerful language like Python, with selection, repetition, functions, graphical effects, and dynamic interaction with the Internet, plus connections to lower level computer organization and computer implications in the wider world.

Outcome: Empowerment to manage and transform masses of data; understanding of technical, societal, and ethical issues involved.

Computing and Data Analysis for the Sciences
 Scientific computing emphasizes data analysis and visualization in a scientific context - analyzing data quickly for understanding by the individual, sharing automated workflows with collaborators, and preparing results for later publication. This course will emphasize rapid, interactive, and reproducible collaborative analysis of data for scientific contribution.

Students are required to have taken MATH 117: College Algebra as a prerequisite or to have been placed in MATH 118: Precalculus or higher.

At the end of this course, students will be well versed in the use of a specific, interactive environment for data analysis (likely Python, R, or MATLAB as indicated in the course notes) for analyzing data and sharing

Object Oriented Programming with Mathematics
 Prerequisites: Math 132 or Math 162 or permission of instructor

This is an introductory programming course for students interested in mathematics and scientific computing. Students will program primarily in a general object-oriented language such as Python, with supplementary exercises in a computer algebra system. Examples will be drawn primarily from applications of calculus, elementary number theory, and cryptography.

Outcome: Students will learn basic scripting and object-oriented programming, with the goal of being able to solve mathematical and scientific problems.

Prerequisite: COMP 313, COMP 363 or COMP 374

This course covers parallel architectures and parallel models of computation. Algorithms for achieving high performance in various computational contexts are discussed. Models such as shared memory, message passing, and hybrid modes of computing are introduced.

Outcome: Students will learn how to engineer solutions to practical problems in multiprocessor architectures and using large physical memories.

Components: Lecture**Requirement Group:** Prerequisite: COMP 313 or 363 or 374**Room Requirements:** General Classroom(1)**COMP 366(3)** Course ID:002199 01-JAN-2016**Microcomputer Des & Interfac**

This course covers computer architecture, CPU logic, data acquisition, signal conditioning, analog/digital conversion and computer interfacing.

Prerequisite: COMP 271

Outcomes: Students will gain a working knowledge of interfacing techniques and design, hands-on experience with professional interfacing hardware and software, and the ability to document and report experimental results.

Components: Laboratory**Course Equivalents:** PHYS 366**Requirement Group:** Prerequisite: COMP 271**COMP 367(0)** Course ID:002200 01-JAN-1901**Cobol & Adv Data Mgmt****Components:** Lecture**COMP 370(3)** Course ID:009418 29-JUN-2012**Software Quality and Testing**

Prerequisite: Comp 271.

The course teaches software testing and quality control concepts, principles, and techniques including black box and white box testing, coverage testing, test case development, and regression testing.

Outcome: Students will learn how to prevent errors, how to get 'bugs' out of software, and be able to apply this knowledge in other courses and projects.

Software Development for Wireless and Mobile Devices

This course will focus on the methods, tools, and technologies for developing software applications for wireless and mobile devices, such as personal digital assistants (PDA) and smart mobile phones.

Outcome: Students will learn user interface design for small screens, programming techniques for devices with limited memory and processing power, data synchronization for mobile databases, and wireless network programming.

Components: Lecture(In person)
Requirement Group: Prerequisites: COMP 313 or 413
Room Requirements: General Classroom(1)

COMP 424(3) Course ID:009710 01-JAN-2016
Client-Side Web Design

This course provides an in-depth study of the concepts and methods required for the design and implementation of the presentation layer of a web application. Coursework includes several substantial programming projects.

Prerequisite COMP 271

Outcome: Students will learn markup of static and dynamic content, content transformation, client-side executable content including client-side scripting and embedded applets, and web-based content management systems.

Components: Lecture(In person)
Room Requirements: General Classroom(1)

COMP 428(3) Course ID:002221 01-JAN-2016
Algebraic Coding Theory

In this course, major types of error-correcting codes, encoding and decoding, and their main properties will be studied. The codes examined will include the Hamming, Golay, BCH, cyclic, quadratic residue, Reed-Solomon, and Reed-Muller codes.

Prerequisites: MATH 212 or Permission

Outcome: Students will learn both the theory and application of error-correcting codes.

Intrusion Detection and Computer Forensics

This course will cover techniques for detecting the unusual usage patterns that typically signal a break-in. The course will also consider differences in detection of local intruders versus intrusion over networks. Finally issues in the prosecution of those breaking in to computers, particularly evidentiary issues are explored.

Co-requisite or prerequisite COMP 271

Outcome: Students will learn to configure ID systems (eg., snort) and analyze their output. They will also understand both network-based and host-based monitoring techniques.

COMP 460(3) Course ID:002227 15-MAR-2006

Algorithms & Complexity

This course will focus both on presenting general techniques for designing correct and efficient algorithms, as well as on formal methods for proving the correctness and analyzing the complexity of such algorithms.

Outcome: Students learn: the ability to design and analyze efficient algorithms; understanding of the necessary models and mathematical tools; understanding of a variety of useful data structures and fundamental algorithms; exposure to the classification of computational problems into different complexity classes.

Components: Lecture**Requirement Group:** Restricted to Graduate School students.**Room Requirements:** General Classroom(1)

COMP 462(3) Course ID:002228 15-MAR-2006

Advanced Computer Architecture

This course presents key principles underlying the design of modern digital computers. The course introduces quantitative techniques used to guide the design process. It describes CPU performance issues and introduces instruction set architectures. The course then uses a hypothetical computer design, with a simple RISC architecture, to show how modern digital computers are implemented, first using a simple non-pipelined implementation, followed by a higher-performance pipelined implementation.

Outcome: Students gain an understanding of the design of the memory hierarchy in modern digital computers, caching and virtual storage techniques, multiprocessor systems, and distributed shared memory systems.

Components: Lecture**Requirement Group:** Restricted to Graduate School students.**Room Requirements:** General Classroom(1)

COMP 464(3) Course ID:002229 15-MAR-2006

High-Performance Computing

This course will use a blend of foundational understanding as well as a set of practical tools to gain insight into performance engineering of software. The course introduces techniques to gain performance boost in Java programs and C++ (or C) programs by discussing the use of multiple processors.

Outcome: Students will learn shared memory, message passing and hybrid models of programming in both tightly-coupled and loosely-coupled computer systems.

Components: Lecture**Requirement Group:** Restricted to Graduate School students.**Room Requirements:** General Classroom(1)

COMP 468(3) Course ID:002230 15-MAR-2006

Database System Design

The course covers both relational and object databases. Issues of physical storage and use of indexes as well as optimization of queries are discussed. The course also covers transaction processing, concurrency, data warehousing, data mining, and distributed databases.

Outcome: Students learn the theory and practice of advanced database design and implementation. They will also gain an understanding of using commercial database environments such as Oracle.

Components: Lecture**Requirement Group:** Restricted to Graduate School students.**Room Requirements:** General Classroom(1)

Compiler Construction

This course covers the basics of writing a compiler to translate from a simple high-level language to machine code. Topics include lexical analysis, top-down and LR parsing, syntax-directed translation, and code generation and optimization. Students will write a small compiler.

Outcome: Students will learn the theory and practice of how to build a compiler.

Components: Lecture**Requirement Group:** Restricted to Graduate School students.**Room Requirements:** General Classroom(1)

Advanced Object Oriented Programming

Object-orientation continues to be a dominant approach to software development. This advanced programming-intensive course studies object-oriented analysis, design, and implementation from a design patterns perspective.

Outcome: Proficiency in the use of object-oriented languages, frameworks, and patterns; advanced understanding of key language mechanisms such as delegation, inheritance, polymorphism, and reflection; familiarity with object-oriented modeling and development tools and test-driven development.

Components: Lecture

Software Engineering

The course discusses real-world theory and techniques organizations use to create high-quality software on time. Students work on a large programming team to create plans, review progress, measure quality, and make written and oral analyses of their project.

Outcome: Students will experience process based development, understand the dynamics of a professional software organization, and develop skills for implementing software with others.

IT Project Management

This course is an introduction to the philosophy and practice of project management. The course involves a student group project to investigate and plan a 'real world' IT project that specifies project objectives, schedules, work breakdown structure, and responsibilities, an written interim report, and a final oral and written report.

Outcome: Students will learn time management, work-flow management, and team dynamics to design, implement and test large-scale software projects.

This seminar course offers undergraduate students the experiential opportunity to engage in research while building their foundation of research methods. Students may be part of the Loyola Undergraduate Research Opportunities Program (LUROP) through a funded fellowship, or students may be working independently with a faculty mentor (volunteering in a lab, working on a research team). All students must have a research project with a faculty mentor identified prior to enrolling in this course. As an experiential learning course, students will need to be engaging in research with a faculty mentor concurrently to taking this course. Students must work a minimum of 5 - 10 hours each week over the semester on their research projects (10 & 15 hours per week over the summer session). Students will reflect on research experience in the context of understanding research paradigms, application of research methodologies, understanding the implications of ethical research, and preparing to present research professionally. The Scientific Basis of Environmental Issues

This is a foundational Tier I class; it is prerequisite to all Tier II science core classes.

The foundational course in science is predicated on the view that understanding environmental issues and their underlying scientific principles will occupy a central role in our students' lives and will be critical in their development as informed and participating members of society. The overarching strategy of the course will be to frame environmental science in terms of a series of interacting systems to allow students to analyze a variety of environmental issues.

Outcomes: 1) Exhibit knowledge of the nature of the four Earth systems 2) Draw inferences from evidence, constructing testable and falsifiable hypotheses and analyzing data.3) Understand the role of energy and

Components: Seminar(In person)
Topics: Jail Policy and Issues
Requirement Group: Restricted to Graduate School students.
Room Requirements: Electronic Classroom(1)

CJC 414(3) **Course ID:002420** **15-JUN-2013****General Special Topics**

Special topic course titles will vary, and will cover issues that do not fit within the four advanced topics areas of criminology, policing, courts, and corrections. Topics may include: Crime Mapping; Social Psychology and the Criminal Justice System; Prejudice, Hate, and the Justice System.

Outcomes: To analyze and discuss topics in criminal justice.

Components: Seminar(In person)
Topics: Corrections Adm & Policy, Drug Abuse Cntrl Ply & Practic, Sexual Offender Profiling, Soc Psy Apls-Crime Cr Jst., The CRMJ System in India, Criminal Sentencing Policy, Famous Criminal Trials, Juvenile Justice, Victims & the Criminal Justice System, Women in the Criminal Justice System, Mental Illness & Crime, Death Penalty, Pol of Mass Incarceration, Cont Issues in Policing, CommunityBased Corrections, Criminal Law, International Criminal Justice, Violence: Definitions, Context & Strategy, Community Context of Social Problems, Urban Culture & Cultures, Psychology and Law
Requirement Group: Restricted to Graduate School students.
Room Requirements: Electronic Classroom(1)

CJC 415(3) **Course ID:002410** **15-JUN-2013****Mental Illness and Crime**

Prerequisites: Graduate students only

This course explores the relationship of mental illness to crime and violence, the policies and programs concerning the treatment of individuals with mental illness in the criminal justice system, including the nature, prevalence and consequences of mental disorder among criminal offenders.

Components: Seminar(In person)
Requirement Group: Restricted to Graduate School students.
Room Requirements: Electronic Classroom(1)

CJC 416(3) **Course ID:002416** **15-JUN-2013****International Criminal Justice**

This course is an introduction to the nature and scope of international and transnational crime, to the emerging legal framework for its prevention and control, and to its impact on the U.S. criminal justice system. Emphasis will be placed on international aspects of the work of different criminal justice agencies, such as formal and informal police cooperation and the use of mutual assistance and extradition agreements, and on the bilateral, regional, and international structures created for crime prevention, punishment, and control.

Forensic Science and the Criminal Justice System

Graduate Students Only.

This course introduces the basic principles and applications of the biological, chemical, physical, medical and behavioral sciences currently practiced and the limitations of the modern crime laboratory. The course then explores uses of forensic science and the applicability to the criminal justice system. Current issues, examples, and presentations are integrated into course material.

Outcomes: Understand the basic concepts, strengths, limitations and challenges of the forensic sciences discipline, the application of the forensic sciences to the management, operations, and policies of criminal justice system, from crime scene processing through adjudication.

Independent Study

Working with a member of the graduate faculty, this course provides students with the opportunity to examine a specific topic in the field of criminal justice through directed readings, interviews, and the completion of a major research paper related to the topic.

Students will gain an in-depth understanding of a specific criminal justice topic through directed readings and independent study.

Components: Independent Study
Topics: Drugs and Policy Analysis

Postmodernism
 Prerequisites: Graduate status

This course investigates "postmodernism" in its various uses--as a literary period, an aesthetic style, an historical moment, a cultural problematic, and a theoretical imperative. The course includes readings in literature and theory as well as other art forms, such as architecture and the graphic arts.

Outcomes: Students will demonstrate their ability to define postmodernism in relation to modernism and postmodernity and to analyze postmodern literature and art through seminar papers, oral presentations, and exams.

 Latino/a Literature
 Prerequisites: Graduate standing and consent of the GPD in English.

Latino/a literature has become an important focus in American literary studies because of its unique relation to questions of language, cultural hybridity, and borders. This course takes an interdisciplinary approach to Latino/a fiction, poetry, and drama, including analysis of Latino/a genres like corridos, testimonios, and teatro campesino. Topics include identity politics, transnationalism, cultural traditions and literary forms, textual recovery, gender and sexuality, and (im)migration.

Outcomes:

Students will gain an understanding of the diversity of forms, politics, themes, and identities in Latino/a

Historical Methods

Prerequisite: 12 hours in HIST

This course studies the ways historians arrive at their interpretation of events. This is accomplished through a history of historical writing or through a special selected topic that illustrates the use of different methods by past and present historians. Students are expected to take this course after completing their four introductory courses for the major.

Outcome: students will understand that history is not a set of facts but a discipline that depends on competing paradigms and the ongoing interpretation of primary sources.

Components: Seminar(In person)

Topics: 20th Century U.S. History, Encounters in the Americas, World History

Western Traditions - Antiquity to the Middle Ages

This course,(and its companion, HONORS 102), opens perspectives on works that have shaped the self-understanding of the Western intellectual tradition. An interdisciplinary team of professors examines these works from a variety of disciplinary paradigms. Students will examine the recurring questions the works pose to each other and to our own culture: questions about the nature of human existence and destiny, and the characteristic problems and possibilities of humanity's struggle for justice, search for truth and hunger for beauty.

Outcome: Studying a selection of major works from antiquity to the present, students learn how each text reflects its own period, how texts within each period present different views, and how ideas change over time. Written and visual expressions of these themes are examined in relation to the political and cultural

Fieldwork in Honors - Internship

The main goal of this course is to provide students with valuable work experience in a professional field connected with their academic program. It allows students to apply and further develop their knowledge and skills through an internship in a non-academic setting. The course is also intended to serve as a "bridge" between college and career. This internship presents an opportunity for students to gain valuable professional experience as an intern in public or private institutions engaged in public service projects. HONR 370 will satisfy the "service" requirement for all Honors students.

Catholicism, Islam and Democracy
 Perquisites: Sophomore status

This course comparatively explores themes related to the process of democratization in Catholic and Muslim settings. The second half of the 20th century saw significant and sustainable expansion of political rights and civil liberties especially in predominantly Catholic countries in Europe and Latin America. Most recently, democratic struggles have gained impetus in several Muslim countries in the Middle East and South-East Asia. Particularly interesting is the transformation of religious actors (e.g., the Catholic Church, clergy, non-governmental organizations, political parties) from bastions of authoritarian status quo into supporters of progressive political change.

Contemporary Islamic Thought and Movements

This course will consider contemporary Islamic thought and movements world-wide. After a brief introduction to Islam and the historical development of the tradition up to the present, students will learn about a range of contemporary Muslim intellectual and activist movements and thinkers through the study of original writings and secondary analysis. Some major figures to be considered include: Syed Maududi, Sayyid Qutb, Fazlur Rahman, and other Muslim intellectuals representing movements such as Jama'at-i Islami, the Muslim Brotherhood, and Islamic liberalism. We will focus on the 20th century up to the most current trends. Some of the theological and social issues that will be discussed are gender, the ideal political order, Islamic law and its role in society, and pluralism.

URB 125(3) Course ID:011775 01-AUG-2012

Chicago-Growth of a Metropolis

This course explores the development of Chicago metropolitan region from the 1830s to the present day. Students will explore the urban area not only through texts, but also through fieldwork.

Outcome: Students will be able to demonstrate understanding of the geography, history and people of the Chicago metropolitan region.

Components: Lecture(In person)
Course Equivalents: SOCL 125
Attributes: CORE PRE-2012 Societal and Cultural Literacy

Social Welfare Policy & Serv I

Prerequisite: sophomore standing. Analysis of institutional structures of welfare as they relate to social problems. Selected major values and interests in American society are used to analyze the social welfare institution.

Students will be able to describe and analyze current social welfare policies and social services within a historical, societal and political context.

Components: Lecture(In person)
Course Equivalents: SOWK 201
Attributes: CORE PRE-2012 Societal and Cultural Literacy
Room Requirements: Electronic Classroom(1)

URB 234(3) Course ID:011776 02-AUG-2010

City, Suburbs & Beyond

Study of the historical emergence of cities, focusing on the ecological, demographic, and organizational processes involved in the continuing growth and change of metropolitan areas and in the relationship of a metropolitan area to the surrounding region.

Outcome: Students will understand fundamental facts and theories about the character and development of cities and urban regions.

Components: Lecture(In person)
Course Equivalents: SOCL 234
Room Requirements: Electronic Classroom(1)

URB 320(3) Course ID:011772 30-JUL-2010

Urban Economics

Prerequisites: Sophomore standing, minimum grade of "C-" in ECON 201 and 202.

This course analyzes the economic role and functioning of cities and examines urban issues such as real estate markets, transportation, economic development, and crime.

Outcome: Students will understand the economic forces that shape urban agglomerations. Students will understand the economic and ethical trade-offs of various urban economic policies. They will be able to think critically about the economic forces that make a city grow and contract over time.

Components: Lecture(In person)
Course Equivalents: ECON 320
Requirement Group: Prerequisites: Sophomore standing, minimum grade of "C-" in ECON 201 and 202.
Room Requirements: Electronic Classroom(1)

Geometry for Middle Grade Teachers
 The content covered in this course will include: Area, perimeter, volume, surface area, Properties of two and three dimensional figures, points, lines, planes, space, the Pythagorean theorem, transformations, fractals, tessellations, perspective drawings and informal proofs. The material covered will address Illinois Learning Standard Goal 7 and Goal 9 and related content performance descriptors for educators. The course is designed for Elementary education majors that wish to enhance, enrich and deepen their knowledge of Geometry and apply for a 6th-8th grade Mathematics endorsement from the State of Illinois.

Mathematics Content Area Standards 7 (Measurement) and 9 (Geometry) from the Content-Area Standards for Educators document published by the Illinois State Board of Education will be emphasized.

 Topics in Mathematical Logic
 Prerequisites: MATH 313 or MATH 351 or permission of the instructor

This course will be a mathematical study of the concepts of truth and proof and how they relate to each other. The main topics to be covered are propositional logic, first order predicate logic, computability and undecidability results.

Outcomes: Students will develop proof writing skills, expand mathematical literacy, understand the expressive power and limitations of propositional and predicate logics and learn the mathematical meaning of "truth" and "proof".

Components: Lecture(In person)
 Requirement Group: Prerequisite: MATH 313 or MATH 351 or permission of the instructor
 Room Requirements: Electronic Classroom(1)

MATH 422(3) Course ID:012616 29-MAY-2013
 Advanced Topics in Number Theory
 Prerequisites: MATH 201 or the equivalent or permission of the instructor

Topics chosen from: Pythagorean triples, Fermat's Last Theorem, Pell's equation, Fermat descent, primes in arithmetic progressions, Mersenne primes, perfect numbers, primitive roots, primality testing, Carmichael numbers, RSA encryption, quadratic residues, quadratic reciprocity, integers as the sum of squares, Gaussian integers, continued fractions, the distribution of primes, Diophantine approximation, elliptic curves; others.

Outcomes: Understand the importance of historically significant concepts and problems in number theory. Understand the proofs of related theorems. Solve problems and prove theorems from topics covered in class.

Components: Lecture(In person)
 Requirement Group: Prerequisite: MATH 201

 History of Math with Science Contributions for Mid Grd
 This course will provide a thematic approach to the history of mathematics with emphasis on contributions by noted mathematicians, mathematical societies and scientists highlighting women and under-represented populations. The history of numbers and numerals, computation, geometry, algebra, trigonometry, calculus, and science patterns will be explored emphasizing the contributions of the Babylonian, Egyptian, Chinese, and Roman civilizations as well as such individuals as Euclid, Fermat, Archimedes, Kepler, Pythagoras, Euler, Hypatia, Sonja Kovalevsky, Emmy Noether and others as appropriate.
 The influence of technology and its applications will also be presented as appropriate.

Course Outcome: Students will obtain a unique historical perspective on the various areas of mathematics in the middle grades.
