Introduction to Computational Physics
This is an introductory computational physics course. The course will cover basic computational skills using
Python and common scientific Python packages. We will solve a set of programming exercises that enhances both
the understanding of introductory physics (Newton's laws, work, energy, momentum) and physics problem solving
skills.

Prerequisite: C- or better in PHYS 125, Corequisite: PHYS 126; Restricted to PHYS, TPAM, and BPHY majors

Outcomes: Students should be able to write a Python program to perform numerical calculations in physics and
gain computational skills that would be utilized in upper division physics coursework and research.

Catholicism, Islam and Democracy
Prerequisites: Sophomore status

This course comparatively explores themes related to the process of democratization in Catholic and Muslim settings. The second half of the 20th century saw significant and sustainable expansion of political rights and civil liberties especially in predominantly Catholic countries in Europe and Latin America. Most recently, democratic struggles have gained impetus in several Muslim countries in the Middle East and South-East Asia. Particularly interesting is the transformation of religious actors (e.g., the Catholic Church, clergy, non-governmental organizations, political parties) from bastions of authoritarian status quo into supporters of progressive political change.

Understanding Bias and Inclusivity
Using an intersectional lens, students learn about how privilege, power, and oppression shape ourselves,
perceptions of others, and our social world. They consider how ourselves and others are shaped by and operate
within the larger social system. Students explore their identities, values, and biases. Students engage in
self-reflection to increase self-awareness.

Outcomes: Identify feelings about course topics. Demonstrate self-awareness of identities and values,
including the value of difference. Engage in intergroup dialogue. Articulate how personal power can be used
to create change.

Seminar in Cognitive Neuroscience
The way that information is represented and processed in the brain is central to a broad range of topics in
psychological science. In this course we will consider how the methods of cognitive neuroscience including
brain imaging (e.g., EEG/ERP, fMRI) and dissociation-based techniques such as neuropsychology and TMS, have
revolutionized the exploration of these topics. We will pay particular attention to how these techniques can
be used to understand higher-level cognition during development and in questions related to social psychology
and psychopathology. Class participants will be introduced to these techniques, read, critique and present
results from the priomary literature, and also have an opportunity to develop ideas using these methods
relating to their own research interests.

Child Development and Cognition
The purpose of this course is to provide students with a graduate level overview of the key theories of
development and cognition. Students will learn about critical issues in development and learning that they
will encounter and need to deal with working as psychologists in applied settings. Throughout the course
students will be asked to analyze, reflect upon, and critique how theories learned may apply, or not, to
those learners whose primary culture may be different from the majority through case studies, online
discussion boards (or in-class discussions), and a critical analysis of comparative field site visits.

Language Demands and Development in Disciplinary Classrooms
Everything we do in classrooms and schools requires language, yet the nuances and complexities of language
are rarely explored in educator-preparation programs. As the population diversifies and more students come to
schools with competencies in languages other than English, teachers must understand how language works so
that they can support students in developing language spanning grades and disciplines. In this course,
teachers will explore the language demands within and across academic disciplines and enact scaffolds to
support multilingual students¿ language development by attending to these demands. Course understandings and
related pedagogical practices emphasize the value of students¿ multilingual repertoires and competencies with
foci on building metalinguistic awareness and encouraging
translanguaging with students¿ languages and language varieties. Pedagogical practices will focus primarily
on building classroom environments to support students¿ language development, including contextual features,

Social Justice for Multilingual Learners
COURSE DESCRIPTION This course introduces educators to foundational principles and practices for promoting
social justice and educational equity while teaching multilingual learners in today¿s classrooms. A central
component to teaching for social justice for students labeled as English learners (ELs), this course prompts
educators to deconstruct their identities, experiences, and perspectives on cultural and linguistic diversity
as a means to recognize and deconstruct language ideologies, deficit-based perspectives, personal biases, and
institutionally driven assumptions. Framed by larger sociolinguistic and sociopolitical themes in the field
of EL/bilingual education, educators explore students¿ diversity in their classrooms and schools and reflect
upon current practice with that lens. Participants then draw from the literature to develop personal
philosophy statements for serving multilingual learners with goals for their own professional learning.

Literacy Teaching for Bilingual & Multilingual Students
COURSE DESCRIPTION
Literacy is widely seen as one of the most important skills that children need in order to be successful in
school and beyond, however the teaching of reading and writing are largely still approached from a
monolingual paradigm even though the vast majority of classrooms have students who speak (and are often
literate to varied degrees in that language) in at least one other language beyond the language of
instruction. Therefore, it is essential that educators acquire the knowledge and skills to consider the
development of literacy from a broader, less restrictive linguistic paradigm in order to engage and
effectively teach reading and writing to their students who are bi/multilingual. Regardless of teaching
context (e.g., grade level;

Teaching Social Studies in Elementary Grade Classrooms
This module introduces candidates to the disciplines of the social studies, providing them experience in the teaching and learning of elementary social studies, and specifically helps candidates integrate literacy into their social studies instruction. Candidates develop knowledge and skills needed to teach social studies through an inquiry approach and integrate literacy into their social studies teaching.

Prerequisites: Graduate School of Education Student Only

Outcome: Teacher candidates will develop and implement an interdisciplinary social studies unit over the course of the module and will develop an essay of demonstrating their understanding of role social studies plays in the elementary school curriculum.

Materials Engineering
This course introduces concepts related to the structure, properties, and processing of materials commonly
used in engineering applications. Major topics include material structure, bonding, crystalline and
non-crystalline structures, imperfections, properties of metals, metal alloys, ceramics and polymers, phase
transformation, and material failures.

Restricted to Engineering Science majors. Prerequisites: ENGR 322, ENGR 323, ENGR 324, ENGR 324L, each with a
minimum grade of C-.

Outcomes: Describe the microscale structure of metals, ceramics, polymers, and composites; quantify and
describe relationships among structure, processing, and properties; understand the role of material selection
  Components: Lecture(In person)
  Requirement Group: Prerequisites: ENGR 322, ENGR 323, ENGR 324, ENGR 324L, each with a minimum grade of C-. Restricted to

Medical Device Software Development II
This is the third semester of a three-semester Specialty course series for students specializing in
Biomedical Engineering. During four weeks, students increase their programming skills through exposure to
advanced data structures and graph algorithms. Separately, software issues that the Food and Drug
Administration considers during medical device submissions are highlighted.

Restricted to Engineering Science majors. ENGR 342 with a minimum grade of C-, concurrent enrollment in ENGR
391.

Outcomes: Analyze software issues that the FDA considers during medical device submissions. Create user
interface and cybersecurity code, according to Requirements Specifications provided by the instructor
  Components: Lecture(In person)

ENGR 353 is the third semester course of a three-semester Specialty course series for students specializing
in Computer Engineering. The course consists of an introduction to programmable logic controllers, relays,
timers, counters, shift registers, human-machine interfaces and programmable embedded systems. The course
includes hands-on experiments and a design project to evaluate the performance and efficiency of programmable
systems, related safety issues and hardware troubleshooting for control and automation systems.

Restricted to Engineering Science majors. Prerequisite: ENGR 352 with minimum grade of C-, concurrent
enrollment in ENGR 392.

Outcomes: Evaluate the performance and efficiency of programmable controllers, embedded systems and

This is the third semester of a three-semester Specialty course series for students specializing in
Environmental Engineering. Overview of engineering solutions to present day environmental issues.
Technologies focused on the mitigation and adaptation to climate change, the modeling and design of best
management practices Overview of engineering solutions to present day environmental issues. Technologies
focused on the mitigation and adaptation to climate change, the modeling and design of best management
practices for stormwater management, an exploration of conventional and renewable energy technologies and the
design of green infrastructure.

Theory and Physics of Mass Spectrometry
This course will cover the fundamental physical principles that are used in mass spectroscopy, with a primary
focus on basic electricity and magnetism theory. This course will not be calculus based.

Pre-requisite: Enrollment in CAMS-MS program

Outcomes: At the end of this course students will be able to: 1) Describe the fundamental principles of
Newton¿s Laws and Conservation of Energy; 2) Describe basic interactions between charged particles and
electric fields; 3) Define electric potentials; 4) Describe the relationship between electric and magnetic
fields; 5) Identify the direction a charged particle will move in a magnetic field; and 6) Derive the
relationship between charge, mass and velocity.

Pre-requisite: Enrollment in CAMS-MS program

Outcomes: At the end of this course students will be able to: 1) Describe the composition of typical
biological collections including blood and waste; 2) Describe best-practices for preparing collections for
mass spectrometry; 3) Describe fundamentals of separating biomolecules according to size, charge and other
physiochemical factors; and 4) Describe mechanisms and tradeoffs behind common approaches for separating
biological samples via chromatography (liquid and gas).

Introduction to Mass Spectrometry Instrumentation
This course will introduce the mass spectrometry instrumentation that is utilized in clinical, pharma, and
academia, including HPLC and other sample preparation instrumentation.

Pre-requisite: Enrollment in CAMS-MS program

Outcomes: At the end of this course students will be able to: 1) Describe the basic technologies and
instrumentation currently used for mass spectrometry; 2) Understand the basics in how to operate this
instrumentation (theory, no hands on); 3) Appreciate the similarities and differences in the different
technologies, and in what situation each instrument would be most appropriate; and 4) Describe the
instrumentation used in sample preparation.

This course will cover the governing principles of analyzing proteomics data, with a special emphasis on data
derived from mass spectrometry (MS). Computational methods and tutorials will complement the theoretical
material.

Pre-requisites: Enrollment in CAMS-MS program

Outcomes: At the end of this course students will be able to: 1) Describe key approaches for matching MS
spectra to known proteins, as well as identifying and quantifying protein content in analyzes samples; 2)
Describe methodologies and limitations thereof for labeling and quantifying proteins of interest; 3) Perform
routine computational analyses of MS data using python; and 4) Describe best-practices for objective data

This course will cover fundamental concepts about the criteria for something to qualify as a biomarker and
how they are analyzed by mass spectrometry from a variety of biological fluids and/or tissues. We will also
discuss the broader uses of mass spectrometry in a clinical or hospital setting.

Pre-requisites: Enrollment in CAMS-MS program.

Outcomes: At the end of this course students will be able to: 1) Compare and contrast aspects of good vs
bad biomarkers and the utility of mass spectrometry for their detection in biological samples; 2) Describe
best practices for sample collection and the limitations of using biological samples; 3) Describe current
regulations and standards for biomarker use in the clinic; 4) Identify and describe biohazard safety issues

This course will cover advanced MS approaches to address specialized needs. These approaches will frequently
require specific instrumentation, and bioinformatics approaches, but sometimes only involve changes to sample
preparation and interpretation.

Pre-requisite: Enrollment in CAMS-MS program

Outcomes: At the end of this course students will be able to: 1) Understand the need for specialized mass
spec approaches; 2) Appreciate the theory behind specialized mass spec approaches; 3) Describe the technical
and practical considerations when utilizing specialized MS approaches; and 4) Be able to choose the correct
advanced MS approach for a particular situation.

Mastering Clinical Ethics Consultation
This 2 week on-campus course provides an opportunity for advanced bioethics doctoral students in the clinical
ethics concentration to refine their clinical ethics skills to a mastery level. Students will participate in
simulated ethics consultations, practice communication and interpersonal skills and receive feedback on their
performance. With access to LUHS, students will participate in clinical rounds, case discussions, and active
ethics consultations and debriefing sessions. This course will require students to reach a predefined
mastery level of skill in simulated ethics case consultations using the Assessing Clinical Ethics Skills
(ACES) evaluation tool. They will also be required to write chart notes for ethics consultations.

CMO 499(1 - 4)   Course ID:013692   01-JAN-2019
Research
CMO 499 is designed to give credit for laboratory research efforts that will result in a M.S. thesis.
Students will learn theoretical and laboratory technical tools to investigate and test a hypothesis. Students
will search the literature for background, rationale, and protocols for their research project. Students will
communicate results and knowledge through written and oral communications.

Restricted to students enrolled in CMO MS program

The outcomes are: 1. Clearly communicate, describe, and implement techniques used for a research problem; 2.
Describe results-obtained; 3. Draw conclusions based on data-obtained; 4. List future directions; and 5.
Understand the significance of the work

Seminar
A seminar will be held on a rotating basis once per week. CMO M.S. students will be required to attend
seminars as part of the CMO 502 course. This course is designed to help students stay abreast of current
topics in oncology. Students will attend weekly seminars, and are encouraged to interact with both invited
and current faculty speakers by asking questions and contributing to group discussions. Upon completion of
this course CMO 502, students will have gained a better understanding of current oncology research.

Restricted to students enrolled in CMO MS program

 The course outcomes are: 1. Describe results or conclusions from a given seminar presentation 2. Understand
how research is advancing knowledge in a given field covered by a representative seminar 3. Question new data

Series one week in advance of their seminar. CMO 503 and CMO 502 will be aligned to expose students to
oncology-focused scientists presenting a seminar the following week. Students will read an article by the
seminar speaker, participate in discussion sessions, and ask questions during the seminars.

Restricted to students enrolled in CMO MS program

 The outcomes will be: 1. Describe cutting edge research in the particular area of investigation covered by
the course ; 2. Discuss limitations to experimental approaches; 3. Discuss real-world application of the
research topic being studied; and 4. Critically read scientific literature on cancer biology.

Applied Physiology of Exercise
This course focuses on biologic system responses at rest, during exercise, and as the result of training.
Major emphasis is placed on bridging gaps between introductory concepts of exercise physiology and the
contemporary research evidence that further advances the field of exercise science. The effect of
environmental systems and factors on the regulatory response to exercise is addressed. The history and major
milestones associated with the development of the science of exercise physiology are presented. Future
developments in the field of exercise physiology, such as the role of genetics and genomics are integrated
into the course. Laboratory and field experiences provide students with opportunities to apply theory to

Motor Learning and Performance
The course provides instruction in how humans control locomotion and how they learn/re-learn motor skills.
Specifically, the course emphasizes the observable behavioral aspects of motor control/learning while
detailing the neurophysiological and biomechanical processes that result in motor behaviors. Major course
concepts include information processing and decision making; speed, accuracy, and coordination; and knowledge
and skill acquisition and transfer.

Outcomes:

1. Understand theoretical approaches that drive motor control and motor learning research.
2. Analyze principles and processes underlying movement skilled performance.

Prerequisite: admission to the MS in Dietetics, Dietetic Internship or FONU Program Director permission.

This course includes emerging scientific research in the dietetics field as it relates to consumer food
choices, evaluating the safety and health of the food supply, functional foods, vegetarian diets, food
allergics and weight management. The course will focus on theoretical foundations, and synthesis of research
trends into practice protocols. Mock counseling sessions will also occur utilizing up to date counseling
methods including movational interviewing for behavior change.

Outcomes: Student will demonstrate knowledge in emerging areas related to dietetic practice.
  Components: Lecture(In person)
  Requirement Group: Restricted to Dietetics Masters and Dietetic Internship students
  Req. Designation: Internship
  Room Requirements: Electronic Classroom(1)

Behavioral Change for Health Promotion
This course focuses on concepts and theories of health and behavior related to food, nutrition and other
behaviors. Evidence to support select skills and techniques for health will be evaluated and applied. The
impact of interventions will be analyzed to provide evidence-based frameworks for behavioral change in
individuals and groups.

Master of Science in Dietetics major, or instructor permission

Outcomes: Incorporate evidence-based behavioral change interventions into nutrition care plans; demonstrate
skill in a behavioral change encounter in a simulation, analyze major approaches and influences of health
promotion (e.g. policy, community engagement, advocacy and social marketing)

Laboratory Fundamentals
Introduction to life in the clinical laboratory. Safety practices, laboratory mathematics, statistical
analysis, and fundamental laboratory training in phlebotomy, pipetting, microscopy and calibrations.

Enrollment conditions: Admission to M.S. in Medical Laboratory Science program

Outcomes: Upon completion, students will demonstrate safe and professional knowledge consistent with the
field of Medical Laboratory Science, including use of universal precautions, phlebotomy, processing
specimens, microscopy, and calibrations.
  Components: Lecture(In person)
  Requirement Group: Restricted to Medical Laboratory Science Graduate School students.

Urinalysis and Body Fluids
Theoretical and applied concepts related to the formation, collection, processing, and evaluation of urine
and body fluids. Study of urine and body fluids including chemical,physical, and microscopic properties. This
course also encompasses the evaluation of normal fluid characteristics, and those that reflect abnormality or
disease.

Admission to M.S. in Medical Laboratory Science program

Upon completion, students will be able to explain the formation of fluids in the human body and correlate
normal and pathological states associated with chemical, physical and microscopic findings.

Molecular Diagnostics
This course is will provide students with an understanding of the processes which have been collectively
referred to as molecular biology as they relate to laboratory medicine. Instruction emphasizes molecular
methodologies and current applications of molecular diagnostics utilized in the clinical laboratory.

Upon completion of this course students will gain a background in molecular biology which will promote
critical thinking and problem solving as it relates to clinical molecular diagnostics.
  Components: Lecture(In person)
  Requirement Group: Prerequisite: Completion of MLS 401 with a minimum grade of C. Restricted to Medical Laboratory Scienc

MLS 430(3)   Course ID:013681   01-JUL-2019
Clinical Chemistry I
This course is designed for medical laboratory science students to gain an understanding of the analytical
principles and components of instrumentation utilized in clinical chemistry
laboratories.

Prerequisite: Admission to M.S. in Medical Laboratory Science program

Outcomes: Upon completion of this course, students will describe chemical constituents of bodily fluids,
their regulation and laboratory methods of analysis for compounds including electrolytes, carbohydrates,
lipids and proteins.
  Components: Lecture(In person)

 Requirement Group: Restricted to Medical Laboratory Science Graduate School students.
 Req. Designation: Internship
 Room Requirements: Electronic Classroom(1)

MLS 440(2)   Course ID:013712   01-JUL-2019
Clinical Chemistry II
Advanced course in clinical chemistry/biochemistry which continues study of measurement and interpretation of
chemical constituents in human blood and body fluids. Topics include endocrinology, organ systems,
therapeutic drug monitoring, toxicology, tumor markers and nutritional chemistry. This course will prepare
students for their clinical practicum in Clinical Chemistry.

Enrollment Condition: Admission to the M.S. in Medical Laboratory Science program

Outcomes: Upon completion, students will be able to identify interrelated human metabolic functions in normal
and disease states, analyze laboratory data, interpret results, and utilize information to determine a
diagnosis.
 Components: Lecture(In person)
 Requirement Group: Restricted to Medical Laboratory Science Graduate School students.
 Req. Designation: Internship

Hematology
Study of formed elements of blood including normal and abnormal conditions. Recognition and correlation of
pathological changes in cells of the peripheral blood and bone marrow to disease states. This course will
prepare students for a clinical practicum in Hematology.

Admission to the M.S. in Medical Laboratory Science program required.

Outcomes: Students will describe the physiology, development of cells, and process of hematopoiesis.
Identification of morphological characteristics for normal and abnormal cellular elements of blood and
associations to disease states.
 Components: Lecture(In person)
 Requirement Group: Restricted to Medical Laboratory Science Graduate School students.
 Req. Designation: Internship

MLS 455(2)   Course ID:013860   01-JUL-2019
Hemostasis
This course will cover the mechanisms by which blood coagulates. Topics explored include the pathophysiology
of hemostatic disorders and the antithrombotic therapies utilized to manage them. Focus on examination of the
coagulation system and correlations of laboratory results to clinical findings in the classification of
disorders.

Admission to the M.S. in Medical Laboratory Science program

Upon completion of this course students will apply knowledge of the process of coagulation to interpret
laboratory results as they relate to hemostatic dysfunctions and treatment of clinical disease.
 Components: Lecture
 Requirement Group: Prerequisite: Completion of MLS 450 with a minimum grade of C. Restricted to Medical Laboratory Scienc

Immunohematology
Focus on principles of the antigen/antibody reactions and their relevance to Immunohematology. ABO/Rh and
major blood group systems, regulation, procedures, adverse reactions, and donation of blood components are
all studied as integral parts to the practice of transfusion medicine. This course prepares students for a
clinical practicum in Immunohematology.

Enrollment Condition: Admission to the M.S. in Medical Laboratory Science program.

Outcomes: Upon completion of this course students will be able to apply theoretical concepts and techniques
to analyze and determine Immunohematology results.
 Components: Lecture(In person)
 Requirement Group: Completion of MLS 401 and MLS 410 with a minimum of a C.Restricted to Medical Laboratory Science Gradu

Bacteriology and Virology
Introduction to bacteria and viruses, with a focus on organisms that
are medically relevant to humans. Specimen collection, processing,
identification techniques, and recognition of key diagnostic features will be emphasized.Students will
correlate clinical features to laboratory findings. This course will preparestudents for their clinical
practicum in Microbiology.

Prerequisite: Admission to the M.S. in Medical Laboratory Science program.

Outcomes: Upon completion, students will be able to identify bacterial or viral organisms by characteristic
clinical features of infections through laboratory testing.

Healthcare in America
This course provides an introduction to the U.S. healthcare system including its overall structure and
function. The history of health care in the U.S. is explored and used to frame the role and function of
healthcare stakeholders including
providers, suppliers, payers, workforce and consumers. Emphasis is given to the government's dominant role
in health care delivery, payment and regulation, as well as the differences between public health and for
profit as well as not for profit health care systems. The social justice implications of cost, quality and
access are highlighted.

Outcomes: At the successful completion of the course, the student will be able to: 1.   Describe the
evolution of health care in America and the influence of history on the current health care system. 2.

Essentials of Medical Terminology
This course introduces students to the language of the health professions. Word
structure, prefixes and suffixes, and rules of building and analyzing medical
words are introduced. Students explore terms relating to anatomy, pathology,
diagnostic and clinical procedures, and select medical specialties. Emphasis is
given to defining, interpreting and pronouncing medical terminology.

Upon successful completion of this course, the student will be able to: 1. Identify structure of medical
vocabulary including prefixes, suffixes and root words 2. Apply the rules of building medical terms 3.
Recognize and define medical terms relating to anatomical structure and function, pathology, diagnostic and
clinical procedures, and medical specialties 4. Use medical terminology accurately in context

Careers in Healthcare Administration
This course provides an introduction to healthcare administration careers. Students explore the various
sectors and supporting industries making up the larger healthcare enterprise. Administrative career options
and industry growth patterns are presented. Students are introduced to working professionals and professional
organizations representing various sectors of the healthcare industry. Class discussions integrate healthcare
industry vocabulary and jargon.

Outcomes: Upon successful completion of this course, the student will be able to: 1. Distinguish healthcare
sectors and supporting industries 2. Describe a variety of roles and functions within healthcare
administration 3. Identify various entry points into a healthcare administration career 4. Explore areas of
interest for career consideration

This course examines the role of the individual and/or management in measuring performance and achieving
quality in healthcare organizations. Content includes the historical evolution of quality into healthcare,
current concepts and practices as well as future trends associated with measuring and evaluating healthcare
through exploration of the tools that are used to achieve assessments of quality and process improvement.

Prerequisites: HSM 240 and HSM 368
  Components: Lecture(In person)
  Requirement Group: HSM 240 and HSM 368

Health Care Planning and Evaluation
This course introduces students to the process of health program planning, including development of program
objectives, methods, needs assessment, budget, timelines, contracting and marketing. Health program
evaluation will emphasize design of a program evaluation including measurement and analysis of program
outcomes, costs, and impact on community health concerns. Psychometric, economic, political and ethical
issues related to health program planning and evaluation are explored.

Prerequisite: (ISOM 241 or PSYC 304) and HSM 358

Healthcare Fiscal Management
This course introduces fundamental concepts related to financial management of healthcare organizations.
Students explore financial-decision tools and the role of financial decision-making in managing delivery of
care. How the U.S. health system impacts an organization's financial health and management is
considered. Major concepts include cost-accounting, budgeting, cost/benefit analysis, and reimbursement
mechanisms.

Prerequisite: HSM 110 and FINC 301

Outcomes: At the successful completion of the course, students will be able to: 1. Describe the impact of
political, social, and economic factors on the cost of patient care delivery. 2. Analyze the impact of U.S.

Health Care Legal and Regulatory Environment
This course introduces the student to the legal environment of the health care industry. The impact of
federal and state regulations on health care delivery systems is explored. The course will focus upon the
legal impact of government regulation of both health care providers and payers, including Medicare and
related fraud and abuse considerations. The role of antitrust laws and corporate structure will be discussed,
with a focus on industry practices that can both increase and decrease liability exposure of the health care
provider.

Healthcare Strategy & Marketing
This course presents an overview of healthcare strategy and marketing. Students examine the unique features
of healthcare as a product. Emphasis is given to strategic processes, including competitive analysis,
strategic decision-making, and marketing fundamentals. Students are provided a foundation of marketing
principles and tools in the context of strategic management.

Prerequisites: HSM 110, 230 and 310

Outcomes: At the successful completion of the course, students will be able to: 1. Discuss the principles of
strategic management in the context of a healthcare organization 2. Explain how strategic management
influences competitive advantage 3. Apply principles of marketing to healthcare organizations 4. Utilize

Health Care Policy
This course presents an introduction to health policy, i.e., the various ways in which government plays a
role in the health of the public and the provision of health care. Emphasis is placed on the structures and
processes that influence policy formation, advocacy and change as well as the role of public and private
leadership as a key component of healthcare policy. The course highlights major issues in health policy such
as Medicare, Medicaid, health care reform under the Affordable Care Act, environmental health policy,
pharmaceutical regulation and long-term care.

Healthcare Data Analytics
This course explores the use of clinical and operational data to improve outcomes and achieve greater
efficiencies in healthcare systems. The role of data analytics in supporting informed decision-making is
emphasized. Topics include data manipulation, analysis, and visualization. Practical business intelligence
tools, such as Microsoft Excel® or Tableau®, are used.

Prerequisite: ACCT 201; ISSCM 241 or PSYC 304

Outcomes: Upon successful completion of this course, the student will be able to: 1. Discuss the role of data
analytics in clinical and operational improvement efforts 2. Demonstrate basic skills in the use of assigned
business intelligence tools or applications 3. Apply analytic techniques to health and healthcare data 4.

Field Internship
This course is a formalized professional experience that may or may not be compensated. Students work on-site
with an organization in the healthcare industry under the supervision of both a field preceptor and faculty
advisor. Students develop skills and practical knowledge beyond the classroom by conducting a goal-based
project of value to the internship site. Project objectives are developed and agreed to by student, faculty
and preceptor. The experience involves four on-campus seminars plus a minimum of 196 on-site hours fulfilled
on a weekly basis as mutually agreed between student and preceptor.

Developing, managing healthcare safety and quality programs by demonstrating strategic importance of concepts
inside healthcare organizations and clients. Discussion of safety science, high reliability organizations,
trends in patient safety, healthcare quality, practices in different healthcare environments, development of
organizational cultures, safety & quality, tools for monitoring performance improvement will be examined.

Outcomes: Students will explain forces driving safety and quality in healthcare, evaluate strategies for
improving safety/quality in healthcare, describe influence of systems on outcomes. Analyze role of various
systems, factors in creating safe environments of care. Explain `just culture¿ thinking on safety, quality
improvement. Develop plan for improvement of safety/quality.

This course is designed as an introduction to environmental public health issues, laws, regulations,
research, and advocacy. Environmental factors including biological, physical and chemical factors that affect
the health of a community will be presented. The environmental media (air, water and land) and various
community exposure concerns will also be presented. The course will utilize available internet resources to
access environmental data, and focus related research. A team project will be completed requiring literature
review and presentation and critical assessment of a successful (or unsuccessful) environmental advocacy
campaign.

Introduction to Epidemiology
Epidemiology is the study of the distribution and determinants of disease in populations and remains the
basic science of public health. This methodology is unique to epidemiology, and in some cases, has even been
appropriated by other fields. The objective of this course is to familiarize students with the range of tools
used to conduct epidemiologic analysis, including design and measures of association. This course will be
taught as an online course combined with an intensive interactive session with faculty and students one
weekend in Spring.

The foundational course in science is predicated on the view that understanding environmental issues and
their underlying scientific principles will occupy a central role in our students' lives and will be critical
in their development as informed and participating members of society. The overarching strategy of the
course will be to frame environmental science in terms of a series of interacting systems to allow students
to analyze a variety of environmental issues.

This is a foundational Tier I class; it is prerequisite to all Tier II science core classes.

Biodiversity & Biogeography
Prerequisite: ENVS 137 or UCSF 137

This course covers the creation and maintenance of biodiversity across taxonomic, temporal and spatial
scales. It will provide an overview of the history of biogeography, increase understanding of the
evolutionary processes that create biodiversity, the influence of biodiversity on ecosystem services, and the
rapid biodiversity loss resulting from human actions.

Outcome: Students will gain knowledge of and appreciation for the biodiversity of life, its formation through
the process of evolution, and the importance of biodiversity to ecosystem function and human welfare.
  Components: Lecture(In person)
  Attributes: Tier 2 Scientific Knowledge, Bioethics, Urban Studies
  Requirement Group: Prerequisite: ENVS 137, BIOL 101 or UCSF 137

Prerequisite: ENVS 137 or UCSF137 for students admitted Fall 2012 or later. Exceptions: Students admitted
prior to Fall 2012 or with a declared major in Anthropology, Biology, Chemistry, Environmental Science,
Physics, Bioinformatics, Forensic Science or Neuroscience.

This course introduces the properties, functions, and conservation of soil. Topics include belowground
ecosystem services, soil biodiversity, biogeochemical cycles, and conservation, human impacts to soils, and
the socioeconomic implications of soil degradation. Lectures, laboratory/field soil testing, field trips,
and presentations by experts in sustainable soil management are employed.

Students will understand the properties, functions and methods of conservation/remediation of soils, learn

Climate & Climate Change
Prerequisite: ENVS 137 or UCSF 137

This course introduces students to basic principles and knowledge to explain climate change. Students will
learn about natural and anthropogenic causes of climate change, the interactions between
earth-atmosphere-ocean systems, climate feedback mechanisms, and impacts of climate change on the natural
physical environment.

Outcome: Students will develop cognitive and mathematical skills to draw valid, logical conclusions regarding
various observed phenomena such as observed changes in the climate system and observed impacts of climate
change.

Science & Conservation of Freshwater Ecosystems
Focus: Freshwater ecosystems are threatened by water extraction, pollution, invasive species, and many other
pressures. This course covers physical, chemical, and biological processes in freshwaters, and the benefits
that humans derive from these ecosystems. Major issues for conservation will be covered at global and Great
Lakes scales.

Prerequisite: ENVS/UCSF 137

Outcomes: Students will gain understanding of different types of freshwater ecosystems, their functioning and
importance for human societies, and the range of pressures they currently face.
  Components: Lecture(In person)
  Attributes: Both Engaged Learning & Tier 2 Scientific, Bioethics, Urban Studies

Prerequisites for Environmental Science and Environmental Studies majors: ENVS 237 & 238; OR BIOL 102 & 112;
ENVS 223 is recommended.

In this hands-on course, students will build knowledge and skills in agriculture and ecology through work in
greenhouse, laboratory, classroom, and field settings. Students will build on foundations of Environmental
Science and Biology by examining challenges of food production, management decisions, and environmental
change facing agroecosystems both locally and abroad.

Outcomes: Students will develop understanding of agricultural systems as related to sustainable practices,
develop skills in ecological analysis of these systems, and demonstrate proficiency in communicating

Prerequisite: ENVS 237

This course links conceptual and practical considerations of food-system assessment and develop a base of tools for practitioners. It examines major elements of the assessment process: systems thinking and conceptual frameworks; the food system from consumer and producer perspectives; identifying leverage points that might be influenced to affect positive change.

Outcomes: Students will understand inter-relationships among environment, food supply, markets, American diets, and health, learn to analyze assessment methods for food-system sectors, and examine conceptual frameworks for food-system analysis.

Sustainable Systems - Natural Science Perspectives.
This required core course provides an integrated overview of environmental science and sustainability which
connect to sustainable development and ecological economics goals to define a just and safe space for the
equitable distribution of life¿s essential re-sources that does not exceed the Earth¿s capacity to provide
and replenish them.

Restricted to GRAD students.

Outcomes: Students will be able to make logical connections between environmental science and sustainability
and evaluate data and primary literature in learning best practices for making evidence-based decisions.

Conservation Biology
Students will learn to apply ecological and evolutionary biological principles to the preservation of wild
plant/animal species, and to the preservation/management of ecosystems. Conservation approaches and
challenges for all types of ecosystems, will be covered, with emphasis on contemporary threats to
biodiversity, including habitat fragmentation, invasive species, and climate change.

Restricted to GRAD students.

Outcomes: Students will understand how the science of ecology can be used to address issues in
species/ecosystem conservation, and recognize that consideration of human actions is essential to address
conservation problems.

Invasive Species
Invasive species are one of the greatest global threats to biodiversity, ecosystem function, economies, and
human health. Species become invasive when moved beyond native range, become established, and cause harm.
This course covers how species are moved, how and when they become established, and potential harm they can
cause.

Restricted to GRAD students.

Outcomes: Understanding that because invasive species are moved by humans, and because many of their impacts
are felt by humans, they are an inherently multi-disciplinary problem.

Sustainable Agriculture
This course provides an introduction to the environmental, social, and economic implications of sustainable
agriculture. Students will learn the origins, major concepts, and current issues of sustainability in
agriculture. Ecological concepts and principles applied to manage sustainable food production to support
community health and economic justice will be explored.

Restricted to GRAD students.

Outcomes: Students will be able to explain the characteristics of the U.S. agricultural system, the
inter-relation among components of sustainable agriculture, and steps necessary to develop a sustainable
agricultural system.
  Components: Lecture(In person)

In this hands-on course, students will build knowledge and skills in agriculture and ecology through work in
greenhouse, laboratory, classroom, and field settings. Students will build on foundations of Environmental
Science and Biology by examining challenges of food production, management decisions, and environmental
change facing agroecosystems both locally and abroad.

Restricted to GRAD students.

Outcomes: Students will develop understanding of agricultural systems as related to sustainable practices,
develop skills in ecological analysis of these systems, and demonstrate proficiency in communicating
scientific information to diverse audiences.

This course links conceptual and practical considerations of food-system assessment and develop a base of
tools for practitioners. It examines major elements of the assessment process: systems thinking and
conceptual frameworks; the food system from consumer and producer perspectives; identifying leverage points
that might be influenced to affect positive change.

Restricted to GRAD students.

Outcomes: Students will understand inter-relationships among environment, food supply, markets, American
diets, and health, learn to analyze assessment methods for food-system sectors, and examine conceptual
frameworks for food-system analysis.

Industrial ecology combines Business, Environment, & Engineering to shift industrial processes from linear
(open loop) systems, where resources move through the system to become waste, to circular (closed loop)
systems where waste becomes inputs for new processes. Students will learn life cycle assessment (LCA) to
measure environmental impacts.

Prerequisite: ENVS 363/463

Outcome: Students will understand how business and industry can create zero waste systems, how a circular
economy works, and the tools of industrial ecology, including life cycle assessment.

Biomimicry - Design Inspired by Nature
This course provides an introduction to biomimicry (or biomimetics) and the application of biomimicry design
principles. Biomimicry is the design of business products, processes, and systems modeled after nature's
wisdom. In biomimicry, nature serves as the design inspiration for sustainable solutions to solve complex
human problems.

Restricted to GRAD students.

Outcomes: Students will learn the concept of biomimicry and life principles, be able to identify examples,
apply biomimicry design principles, and view nature as model, mentor, and measure.

Race and Real Estate
The objective of this course is to understand the laws and policies, politics and financial systems in our
country that established and sustained segregation, creating our cities¿ black slums, ghettos and urban
neighborhoods. The course would address federal, state and local legal systems, with particular emphasis on
Illinois and Chicago. It would cover the Fair Housing Act as well as the Kerner Report; FHA policies,
including the Underwriting Manuals that led to redlining; zoning laws and urban planning; public housing and
HUD¿s HOPE VI program; the legality of restrictive covenants; as well as case law related to each of these
areas. And finally, this course would address where this has led us to today: the policies, laws and
regulations that have attempted to reverse segregation, and those that continue to allow discrimination to
continue by exploiting and financially devastating minority neighborhoods.

Alternative Dispute Resolution Workshop
One credit workshop focusing on dispute resolution in an employment setting. Workshop takes place over two
days. Both the first and second day of the workshop involve resolution of an EEO complaint in full length
simulations -- the first day using mediation, and the second day resolving the dispute using arbitration.
Students are expected to read and research in preparation for both days of the workshop. Participation in
the one credit workshop requires attendance in an evening Human Resources and Employment Relations (HRER)
course. Students will be assigned to teams and will begin working with HRER team members at this evening
session. Each workshop day is followed by a debriefing session. All participants will be observed and
evaluated by employment attorneys skilled in ADR. Enrollment is limited to students simultaneously enrolled
in Professor Sacha Coupet's other ADR course and students who are seeking an intensive mediation and
arbitration experience in addition to that provided by the foundational ADR course.

Mindfulness and Well-Being
Are you stressed? Would you like improve your focus and memory? Prioritizing a healthy brain is important not
only because learning the law is intellectually challenging, but also because lawyers suffer from anxiety,
stress and substance abuse at an alarming rate. The objectives of this course include learning how
mindfulness meditation, food choices, exercise, and various stress reduction techniques can improve brain
health and well-being. You will practice meditating regularly both in class and on your own and will be
introduced to science that demonstrates how mindfulness meditation can physically change your brain in a
short period of time. This course will also cover using mindfulness to heal from technology and other
addictions. You will also learn how mindfulness practice builds a variety of human capacities and skills that
can be consciously applied with clients, colleagues, staff, opposing counsel, judges, juries and others. We
will make these connections throughout the course using readings, meditation (together and apart), videos,

Class Actions
Some of the most cutting-edge and challenging litigation in the courts today are class actions or complex
cases involving numerous parties and/or very complicated claims. These cases can take up enormous resources
of our courts and the litigants and yet result in resolutions that are fair and efficient if litigated and
adjudicated properly. This course focuses on the emerging issues in such cases, the innovative uses to which
scientific evidence is being put in class actions, and the methods used to resolve such disputes. Students
will be expected to participate as part of litigation teams in strategic discussions and exercises
highlighting the material covered in the course and will be evaluated on those exercises as well as a final
examination. The class would meet, at a mutually convenient time, once a week for two credits and feature at
least two guest speakers (e.g., class action lawyer, jurist, expert).

Argument and Persuasion
Argument and persuasion are essential human activities. Both have been practiced, in one form or another, for
as long as human beings have interacted with each other; both have also been the subject of study since
earliest times. Much of what guides us today comes to us from the ancient Greeks, but modern cognitive
psychology also contributes to our understanding as how audiences of various types are persuaded in various
circumstances. This course is particularly interested in what constitutes effective legal argument,
particularly in the resolution of constitutional questions by appellate courts. The first part of the course
will consider the general problem of persuasion by focusing on classical theories of argument and, to some
extent, on the understanding of effective persuasion derived from contemporary cognitive psychology. Since
the aim of appellate advocacy is to persuade a particular and specialized audience, namely, appellate judges,
the second part of the course will consider the particular demands and requirements of persuasion that arise

Complex Federal Criminal Practice Seminar
From the convening of a grand jury to the disposition of charges, federal criminal prosecutions involve a
series of complex investigative and prosecutorial topics. This class will explore complex issues involved in
federal criminal law including corporate criminal liability, the prosecution of public corruption cases,
involving foreign and domestic initiatives, and organizational prosecutions utilizing RICO.

Taught by an experienced trial attorney, Ms. McClellan (currently an Assistant United States Attorney) the
class will analyze issues surrounding the prosecution and defense of complex criminal matters. In the
context of corporate criminal matters, the issues analyzed will involve the expansion of the principles
surrounding corporate liabillity, internal and external investigations and whistle blowers after the
Dodd-Frank Act. With regard to prosecutions of public corruption, the course will focus on domestic

Law & Catholic Social Thought
On its website Loyola University Chicago defines itself as ¿Chicago¿s Jesuit, Catholic university.¿ It also
makes clear that Loyola is fiercely dedicated to promoting ¿social justice.¿ Likewise, in its Mission
Statement, the Law School claims to be ¿inspired by the Jesuit tradition¿ and that it seeks ¿to prepare
graduates who will be ethical advocates for justice and equity.¿

Did you ever wonder what this means? What is the justice that Loyola claims to support?

There are, of course, many ways of defining justice, and many critical perspectives through which law may be
examined: Law & Economics, Legal Positivism, Classical Liberalism, Rawlsian Welfare State Liberalism, Legal
Feminism, Legal Realism (and its successor Critical Legal Studies) and Critical Race Theory. For each of

International Arbitration: Public and Private
This course will familiarize you with what has emerged as the primary means of resolving cross-border and
multi-jurisdictional commercial disputes in today's global economy, international arbitration. You will first
learn about international commercial arbitration, which is carried out between private companies having
disputes over international commercial contracts. You will then focus on international investment
arbitration, which is a dispute mechanism provided for by treaty that permits an investor to have recourse to
international arbitration when a dispute arises, rather than to the courts of the host country. Throughout
the course, you will explore the similarities and differences between international arbitration and the
procedures used in common law (i.e. the U.S. and U.K.) and civil law (i.e. most of Europe, Asia and Latin
America) systems. You will develop an appreciation for the cross-cultural nature of international
transactions and disputes and attain a certain facility with key international arbitration rules,

Abolition and Movement Lawyering
This class is designed to be a space for reimagining our world, and how we, as lawyers and future lawyers,
can work to dismantle the systems of White supremacy and oppression that incarcerate, punish, and harm Black
and brown people in the U.S. while failing to prevent, address, or repair harm or facilitate accountability.
Abolition is not just about the dismantling or absence of systems, but as Ruth Wilson Gilmore states,
abolition is about presence. Movement lawyering/community lawyering is about taking direction from directly
impacted communities and from organizers, as opposed to imposing our leadership or expertise as legal
advocates. What can we work to build that is life-affirming instead of life-destroying, that is in solidarity
and not another manifestation of the underlying problems? This class will discuss the difference between
reform and abolition, the history of abolitionist organizing in Chicago, and the historical and current role
of lawyers in social movement.

This course will examine the role of the law in replicating our nation¿s racial hierarchy as manifest across
indicia of socio-economic well-being. The class will also analyze various legal means for disrupting this
hierarchy. In particular the court will assess the underlying legal dynamics of all material racial
disparities along with legal solutions for the diminution of such disparities. The course will take a social
justice approach to the continued influence of race on social well-being. As such, the course will focus on
the legal system¿s ability to secure broad-based and sustainable human development, and to actualize the full
potential of the entire US population. The course will consider theories suggesting that law should promote
the common welfare and secure liberty for all.

Comparative Consumer Law
This course will be taught by Illinois Attorney General Lisa Madigan, assisted by Dean Jean Gaspardo. The
Attorney General is the state's chief legal officer and is responsible for protecting the public interest of
the state and its people through advocacy, legislating, and litigating. Protecting consumers and businesses
that have been victimized by fraud, deception or unfair competition is one of the primary functions of the
Attorney General. Her office receives 25,000 consumer complaints each year. In her many years of service
since 2003, Attorney General Madigan has gained a solid, national reputation for prosecuting offenders
perpetrating fraud against Illinois consumers. Most recently, she paired with a couple of other mid-west
states Attorney Generals to prosecute the many big banks [¿too big to fail¿] for their predatory lending
tactics, recovering billions of dollars. The course will focus on Consumer Law, including the role of the
state in enforcing legislation protecting consumers. The course will also address the role of private

Supreme Court Seminar
The aim of this seminar is to provide students with a deeper understanding of the Supreme Court of the United
States, its personnel and work, and the important role it plays in American government and society. Students
will consider the processes by which Justices are appointed to the Court; the standards and processes the
Court uses to choose cases for review and decision on the merits from among the multitude decided each year
by the lower courts, leading to the creation of precedents of national applicability; the ways in which
advocates endeavor to persuade the Court that it should (or should not) grant review in a particular case;
and the ways in which the so-called ¿merits cases¿ (those in which review has been granted) are briefed,
argued, and decided. A substantial part of the semester will be devoted to the study of a small number of
cases currently pending before the Court, either as candidates for review or for decision on the merits.
Students will learn about the work of the Court by studying briefs that were actually filed and transcripts

Advanced Litigation Skills
Learning litigation skills task-by-task can leave the young practitioner with little guidance on how to form
the overall strategy necessary to develop and present an effective civil case. While covering a wide range of
specific skills, including opening statement and closing argument, the careful researching of local rules,
techniques for examining witnesses, techniques for oral argument and applying a structured approach to
settlement negotiations, this course will emphasize the aspects of these skills that support an overall civil
litigation strategy. This course will require students to review a variety of materials in preparation for

student's written work.

Business and the Law
 The majority of practicing lawyers represent businesses or individuals with business or investment
interests. Unfortunately, the majority of law students have had limited exposure to business law and the
first year curriculum offers few opportunities to explore this area. This course is intended to expose first
year law students to the fundamental issues and perspectives that pervade business law. The goal is to make
these topics accessible to all students, particularly those who have not taken many, if any, undergraduate
courses in business, economics or accounting.

The course will be divided into three segments. The first segment, entitled ""The Law of Business,"" will
introduce students to fundamental business and tax law concepts as well as transactional issues that business
lawyers confront. These issues include the alternative ways of organizing a business (corporation,

Advanced Business Organizations including a Comparative Perspective
This course focuses on U.S. corporate law and governance. It begins with an introduction to the different
legal issues encountered in business entities across jurisdictions: agency problems between (1) directors and
shareholders, (2) majority and minority shareholders, and (3) shareholders and other stakeholders (employees,
creditors, the State, etc). It then turns to the three agency problems as they arise in private or publicly
held corporations. This covers the questions of allocation of powers between shareholders and the board,
directors¿ elections, executive compensation (say-on-pay), self-dealing transactions, going private
transactions, insider trading, mergers and acquisitions, fiduciary duties and participation of other
stakeholders in the corporate governance. For each topic, we will define the legal issues involved and
examine how U.S. statutory and case law respond to them. We will also take a comparative perspective to
analyze how other jurisdictions respond to the same legal issues. The comparison will thus provide students

Emerging Issues in Public International Law
 Over the past several decades, largely within the context of international organizations, the global legal
community has faced complications posed by the threat of terrorism and the reemergence of genocide. As a
result of these developments, there has been a reexamination of the traditional role of the sovereign state
as the constitutive element of public international law. Consequently, there is an emerging trend to regard,
at least by some, the need to augment the role of the sovereign state with that of the international
organization to respond to these new global challenges. A principle illustration of this is the concept of
the ""responsibility to protect"". Readings will be taken from primary sources (especially documents of
international organizations) as well as contemporary secondary sources, principally scholarly articles.
Students will be required to purchase a short book that introduces the major topics of public international

course will start with a legal and technical introduction to the electricity grid, including discussion of
federal/state jurisdictional issues, basic engineering concepts (taught with lawyers in mind) of the grid,
and the basics of regulated and deregulated electric markets. The class will then address issues involving
emissions and emission prevention, including the Clean Air Act (Title V and recent coal emission rules),
renewable energy (including state incentives, Commerce Clause issues, and basic market design issues), and
carbon capture/sequestration (including liability issues and state incentives). For their research papers,

Housing Discrimination
This class will introduce you to U.S. housing laws and policies with a focus on fair housing and fair
lending. The class will provide an overview of civil rights litigation strategies and compliance with
federal regulations from the perspective of a variety of participants in the housing market, including
lawyers, developers, tenants, banks, government officials, and fair housing organizations.

In addition to addressing housing policies and the intersection between segregation, housing discrimination
and gentrification, the class will also examine leading cases in fair housing litigation. It will also
focus on alternative dispute resolution of housing discrimination cases, and students will participate in a
mock fair housing mediation.

Transportation Law
Transportation and logistics is a multi-trillion dollar industry. Every item you purchase or use in your
everyday life was delivered by a truck or other mode of transportation (rail, ocean, air). America could not
function without the transportation industry. There have been a series of deregulations affecting the
transportation industry over the years. After September 11, 2001, cargo security became an important issue
for the United States, which lead to many new laws and regulations. This constant roller coaster of
deregulation and regulation makes being a transportation attorney very exciting. This course will briefly
describe the different modes of transportation and the regulating bodies for each. We will focus on the
surface modes of transportation, namely trucking and rail. The main topics discussed will be contracts,
tariffs, liability for loss and damage to cargo, tort liability of shippers, carriers, customers, and brokers
during and after the transportation of freight and a comprehensive understanding of insurance and the various

necessary to enhance your bar exam preparation. In this pass/fail course, we will focus on a combination of
substance and skill through the presentation of specific techniques for maximizing performance on all parts
of the bar exam. The course will focus on the most heavily tested doctrine in three bar exam topics,
exhibiting how those topics have been tested on the Multistate Bar Exam (MBE) and on the Multistate Essay
Exam (MEE). In this class, you will learn and review heavily tested subtopics, learn essay and MBE
test-taking strategies, increase proficiency in taking MBE questions, and learn how to write a passing bar
exam essay answer. You will receive individualized feedback on written assignments that will help you hone
your writing skills and give you the tools you need to successfully self-grade during bar prep.

Contract Negotiaton and Drafting
 The purpose of this course is to provide exposure to contract drafting and negotiation to students with an interest in transactional law. During the course of the semester we will examine the purpose and process of drafting documents. We will also spend time discussing the business side of transactional law and how best to work with and counsel clients. In some instances, we will start with form documents borrowed from prior transactions (precedent) and we will revise these documents to reflect the particular facts and circumstances surrounding our transaction. In other instances we will work through drafting a document from scratch. Finally, we will spend time reviewing and revising existing documents and discussing the logistics of working through a variety of business transactions. The course will include numerous drafting exercises and some negotiation. By the end of the semester, students should have a basic understanding of how and why contracts are drafted and negotiated. Black Traditions in International Law
This class will trace the international legal claims of African American and the black diaspora to freedom
from slavery and its continuing remnants in the United States. The goal is to trace the freedom dreams of
blacks that have been sidelined and marginalized by the international legal visions of white and liberal
international lawyers. Its specific objectives will be:

(a) to discuss the international legal contributions of African Americans to international law and practice,
and in particular how African Americas inaugurated new streams of black international legal thought in the
last several decades;
(b) to analyze the global vision of black traditions of international law by highlighting the whole spectrum
of African American experience and engagement with international law without distortion and

Refugee Law and Policy: Welcoming the Stranger
 Refugee law is one of the most dynamic and rewarding areas of law. Nonetheless, in observing the
administration of refugee law, we bear witness to some of the United States' most egregious human rights
abuses and the abandonment, in some cases, of the rule of law. The goal of this course is to teach students
the history of the norm of non-refoulement, in doing so to understand how political, religious, racial and
other minority groups are intended to be protected (from persecution, from torture, and from death). Students
will learn the history of the Refugee Convention-for whom the document was written, and, consequently, who is
left out of protection (considering for example the treatment of victims of private-sphere persecution or
climate refugees). Students will learn the role of xenophobia, racism, and subjugation of the ""other"" in
this case the ""alien""-other in administering the rule of asylum law. The class will contain a comparative
analysis of refugee law under various international and domestic systems. Finally, students will learn about

International Arbitration
This is a one credit course taught sometimes in one of the summer programs. In this course, students will
learn how international commercial arbitration works. In most international contracts, the parties agree that
all disputes will be resolved by arbitration. This private dispute mechanism provides a number of advantages
over litigation. One of the most important advantages is that by agreeing to arbitrate, a party avoids ending
up in the other party's court system. An arbitration award is also more easily enforced in a foreign
jurisdiction than a court judgment, because of an international treaty known as the New York Convention.
Students will learn about the various laws and rules governing international arbitration, as well as
specific, practical knowledge about arbitrating, such as how to draft an arbitration clause, how to choose an
arbitral institution, how to select arbitrators, the ethical rules that apply to arbitrators, the bases for
challenging arbitrators, the conduct of the arbitral hearing, rules governing admission of evidence,

The course is designed for law students who are looking to supplement their existing knowledge of the
language with Spanish that focuses on the legal field. Its main objective is to develop adequate
communication skills that will allow you to advise Spanish-speaking clients on issues related to criminal,
property, civil, labor, administrative, tax, commercial, and litigation law.

We will work with real documents and texts, analyzing cases, as well as reinforcing knowledge of both Spanish
in the legal field as well as of different branches of law in the judiciary system. Coursework will be
carried out in groups, and a system of continuous evaluation will be implemented using assignments and

This course surveys the field of electronic communications, from the telephone to broadcast media to the

Internet, which is capable of providing both mass media and individual communications services. This course
will examine legal issues affecting all of these media. Much of the course material necessarily covers the
history and theory of communications regulation as practically applied through FCC rulemakings.

 Intellectual Origins of ""Othering"" in the Law of Nations
 Today, many nations and peoples with formal legal equality are not, in practice, treated equally in
international relations. One reason for this is that some nations and peoples were once unequal under
prevailing law and legal theory. This course surveys key Western political and legal thought that led to
""othering,"" or legal inequality, in the ""Law of Nations,"" which was a general body of law that eventually
became what we today call ""international law."" After setting out key concepts and themes, the course traces
the evolution of thought regarding: the nature of human societies, the interrelationship of human societies,
the rights and rules of war, and the acquisition and possession of land by peoples and nations. As necessary,
students will be required to review relevant geopolitical history that both influenced and resulted from this
evolution. A note of caution: this course will encounter detestable concepts, such as the persistent idea
that some humans were ""natural slaves,"" ""infidels,"" ""savages,"" or ""barbarians"" unworthy of equal

approach to advocacy which harnesses together at least four principles: purpose, preparation, presentation
and persuasion. Courtcraft should never be an option for the would-be advocate. It is not a luxury, but an
essential grounding without which no law student can begin to call himself/herself an advocate. Like any
skill, advocacy can be taught. Few of us are born advocates. Most need training and guidance. Courtcraft
develops and enhances all that the student of law has been taught and prepares him/her for excellence in
advocacy.

Our courtcraft programme is not founded simply on theory or academia. It is based on our own many years of
experience as advocates appearing almost daily in court. Purpose Your role as a lawyer and advocate.Your duty

Illinois Civil Litigation Practice
This course will empower you to practice in Illinois state courts (where 90% of all litigation is heard) with
the efficacy of a seasoned litigator. Teaming star civil litigators with veteran judges, this redesigned
two-session intensive course will focus sharply on the crucial knowledge and skills needed to survive the
confusing and hectic civil court system. The course will enhance your written and oral argument skills in
the context of the labyrinth of procedural rules and statutes that govern different phases of civil
litigation in Illinois. Using hypothetical scenarios, students will learn how the rules apply to the facts
and substantive law in a concrete way, as well as how to argue issues arising in the pre-trial setting. You
will write briefs (up to 8 pages), argue motions, serve as a judge, and instruct your fellow students on the
law, all over two sessions, each one lasting one and a half days. The first session will generally focus on
pleadings and motions directed to pleadings, while the second session will generally focus on discovery and

This course will consider a number of topics residing at the cutting edge where law and legal philosophy meet, including: What is law? Must law be related to morality? What is the interpretative function of courts? Should integrity constrain what courts decide? From whence does the duty to obey law come? Are there any human rights? Might some of these rights by manifested by our ideas of liberty, privacy and freedom of expression? Need we respond to terrorism by changing our values? What is distributive justice as compared with corrective or retributive justice? Are distributive justice questions implicated by court decisions involving affirmative action, gender, and sexual orientation? How is corrective justice manifested in tort and contract law? What is ownership? Is ownership of intellectual property morally justified? What is the relationship of causation to responsibility, and what is punishment and how is it justified. Reviewing and Righting Wrongful Convictions
The course explores and addresses the causes of wrongful convictions. We will also explore how the law has changed in response to what we¿ve learned about wrongful convictions. Among other factors, the course will specifically consider interrogations and false confessions, forensics and their (mis)use in the criminal law, and eyewitness testimony and memory and factors that may make it fallible. The course will draw from case law, national academy of science reports and related research, and multidisciplinary research in the areas of psychology, social sciences, and the law. The course will also focus on solutions: how have system actors responded? What changes in law have emerged? What changes in practice, including practices in prosecution or police departments. We address the systemic causes of wrongful convictions and consider the impact of such convictions on men and women of color, particularly on Black men and teenagers, who have been disproportionately impacted.

Remedies
This course examines what courts, including juries, have the power to do in civil cases once a litigant shows he or she has been legally wronged or is threatened with legal wrong. The subject matter of Remedies, now a required subject of inquiry on most state bar examinations, is very broad, meaning, in part, that it draws on many topics of legal study. Constitutional Law, Torts, Contracts, and Federal Civil Procedure, in particular, bear directly on the subject matter of the course. Remedies is therefore sometimes called a ¿capstone course,¿ because it provides students an opportunity to bring together what they have learned in other courses on substantive and procedural law. One important component of the course is review problem sets (problems similar to examination questions and often presaging them) that are discussed in class. Another is an emphasis on how the remedial issues that become the subject of appellate opinions arise in the first instance, and are presented and play out at the trial court level. This course surveys the field of electronic communications, from the telephone to broadcast media to the

Internet, which is capable of providing both mass media and individual communications services. This course

American Legal History
Deep controversies over political issues present now¿immigration, health care, the power of states, even
presidential power will be shaped and possibly resolved by law. This has been so from the Colonial era until
this moment. The fundamental idea of this course is that, seen through the lens of history, law has molded
and been molded by our social, political and economic relations. American law has been essential in
determining the most fundamental questions affecting us¿slavery, voting, property-holding, the status of
women, the role of religion, what agreements we may make, who is responsible for accidents, whether wealth
may be taxed, pollution, and countless other topics. The class critically surveys the legal concepts, forms
and institutions that have shaped and been shaped by American society throughout its history.

Storytelling and Presentation Skills for Lawyers
This course is designed to train student lawyers in the art of storytelling and persuasive presentation for
the courtroom. Training will focus on the goal of persuading juries by presenting complex material in
narrative form with the ease of a conversation. Students will learn how to construct powerful stories that
illustrate critical aspects of the case, using simple language, effective pacing, and vivid character
development. Students will also learn how to use vocal inflection and body language to tell the story
between the words, project confidence, and how to make a mental/emotional connection with the jury. Courtroom
delivery is examined through principles that apply to all spoken interaction: use of space, use of visuals,
and use of time. The course focuses concepts drawn from literature, theatre, and public speaking. Students
learn the practical skills that apply to openings, closings, witness interrogation, and prospective client
interviews. Each day includes both lecture and practical workshop components. Students will prepare and

Global Access to Medicine: A Patent Perspective
This course considers how patents impact access to medicine in today's global economy. While there are many
issues that impact access to medicine, patents are the highlight here because patents are often poorly
understood, yet have an enormous impact on access to medicine. After all, the existence of a life-saving or
sustaining drug is essentially of no utility if it is priced beyond reach. This class aims to broaden
students¿ consideration of different views of patents in the context of exploring a growing web of
international agreements that require nations to adopt specific types of patent laws that have implications
for the cost of drugs. No prior knowledge of patents or international law is required, although students will
learn some aspects of each by the conclusion of the course. Student grades will be based on class

have the power to choose, we have the power to live a life that conforms to our personal values, including
the strong values instilled upon us at Loyola. When we are not encumbered by poor financial choices, we are

Client Counseling Weekend Workshop
This skills training course is conducted in an intensive workshop format over the course of one weekend.
Students will learn the goals and tactics for the most effective client interviewing and counseling
relationships. Students practice application of skills and tactics of interviewing and counseling through
role-playing as client and attorney. The course will teach skills including effective questioning, dealing
with emotions, developing the client case narrative, identifying and addressing implicit bias, meeting
clients where they are, and rapport building. The course is ungraded; however, students will be evaluated by
in class performance to determine a grade of pass or fail.

Students may register for the Client Counseling Weekend Workshop to receive one credit. It is an option to
also register for the Negotiation Weekend Workshops to receive a total of two credits for participating in

Business Practice Transactional Skills
This course is offered in a 2-credit version in the fall semester, and in a 3-credit weekend version in the
spring. In the spring (3-credit) version of the course, students will have the same two credit hour
experience in the classroom, together with an extension of the classroom experience through an additional
hour of related, self-directed work on additional simulation scenarios during the course of the semester.
Students may take elect to take this course in the fall or in the spring, but not both.

This course will promote skills essential to successful lawyers in business transactional practice:
evaluating facts; understanding the central business objectives of clients as well as the goals of other
parties to the proposed transaction or relationship; issue spotting and problem solving; and developing,
advocating for, and implementing responsive strategies.

Mediation Advocacy
This course is designed to give you an important skill set: preparing for and negotiating on behalf of a
client in a mediation setting. Unlike a trial, arbitration or appellate setting, where the people listening
to you are neutral, in a mediation you are dealing with the decision makers on the other side, people who
often behave in a hostile manner towards you and your client. Through practice you can acquire skills that
will make you an effective advocate in a mediation setting, including learning to communicate information to
the other side in a way they can hear it, identifying the various needs and interests of the parties (as
opposed to just the positions), and approaching a dispute as an opportunity to solve a problem creatively. We
will touch on the decision science (neuroscience, psychology, and behavioral economics) and cultural
competency tools that can make you more effective, and also explore Online Dispute Resolution (ODR), which is
quickly emerging as a way to resolve disputes using AI in combination with human mediators.

In recent decades, courts, communities and schools are returning to restorative methods to address family
issues such as child guardianship; escalating violence in our schools and streets; reintegrating prisoners
into their communities; making decisions about appropriate sentencing; and the role of victims in the
process. In each context, the same issues must be addressed: who is involved, what are the needs of the

workshop format over the course of one weekend. Students will be able to identify the core principles
underlying the restorative justice paradigm, compare and contrast restorative and retributive justice models,
and learn the basic elements of conflict resolution techniques through a restorative lens. We will address

Humanitarian Law and Conflict
This seminar examines the international rules regulating armed conflicts and other armed violence. Topics
include the rights and responsibilities of states and individuals under international law, armed conflict
identification and classification, the law of the sea, and rules regulating the conduct of fighters and other
aspects of armed hostilities, and international human rights law. The course is designed to prepare students
for competitions and/or future practice in these areas of law, such as in a government/military or
non-governmental organization setting.

The final grade is determined by group projects that include answering scenario-based humanitarian law
questions and a research project to be selected and completed by assigned student groups.

Comparative Education Research
 This unique course will immerse students in a comparative analysis of early education law and policy in
Italy and the United States. The specific focus of the class will be the world-renowned approach to
preschool education developed in Reggio Emilia in northern Italy. The preschools in Reggio Emilia are widely
regarded as the best in the world. The ""Reggio"" approach to early education is built on a particular
understanding of the biological and social nature of children, and the role of the state in developing its
young. Accordingly, the class will begin with an exploration of the neuroscience undergirding the Reggio
approach and how this science informs: educational objectives and methods; the architecture of the
educational environment, the connections between school and community and the legal and political structures
surrounding children. Throughout the class, the ""Reggio"" aapproach will serve as a benchmark for
understanding and assessing the law and policy of early childhood education in the United States. The class

Negotiations Seminar
Negotiating effectively is one of the most important qualities of a successful lawyer. This course seeks to
help you move from negotiating by instinct, as most people do, to negotiating more thoughtfully, more
comfortably and with a clearer sense of purpose.

This course merges theory with practice to: (1) develop your understanding of negotiation, and your awareness
as a negotiator; (2) give you tools and concepts for analyzing and preparing for negotiations; (3) enhance
your negotiating skills through frequent role plays, analysis, and feedback; and (4) teach you how to keep
learning from your own negotiation experience. In addition to negotiation skills and theory, you will be
introduced to issues of representation, ethics, and the place of negotiation in our legal system.

Mediation is a dispute resolution process that enables parties to negotiate their own settlement with the
assistance of an impartial third party neutral (the mediator), instead of having a judge decide the outcome
for them. As it has become increasingly institutionalized within the legal system, it is important that
lawyers be familiar with its benefits, as well as with how it works.

This course will offer an overview of mediation theory, techniques, applications, and history. Through
simulations and other in-class exercises, students will consider how mediation differs from other types of
dispute resolution processes, how mediation styles differ from one another, in what different contexts
mediation is used (including commercial, divorce, community, and employment conflicts), and what the role of
the attorney-advocate is during mediation.

Securitization is a form of highly sophisticated business transaction in which a company seeking financing
gathers together pools of its financial assets, such as auto loans, deposits them in a bankruptcy remote
subsidiary and causes the subsidiary to issue securities or borrow loans that are backed by the pool of
financial assets. Well-known types of securitizations include mortgage-backed securities and collateralized
debt obligations. Although these types of transactions received a great deal of scrutiny during and after the
financial crisis, securitization also includes other forms of asset-backed securities that are an essential
component of modern financial markets.

As this course will demonstrate, a successful securitization integrates a bunch of different bodies of

Art Law
Art Law and Transactions is a study of the main legal issues involved in the acquisition, ownership and disposition of works of art. The primary perspective is that of an attorney in the representation of an art collector, and how the transactional arc involves regular concerns, such as contract law, as well as art specific concerns, such as Nazi-era looted art. Part I Acquisition begins with a focus on the legal issues raised by the various venues for art purchases (art commissions, through a dealer, at auction) and follows with the two core issues of authenticity and good title. Part II Ownership concerns three topics that could arise during the ownership phase: crossing borders, moral rights and art loans. Part III Disposition completes the transactional loop with a discussion of how one transfers works of art during life or at death, whether by sale or gratuitious transfers, including valuation concerns. The course will include several drafting exercises (some of which will be done in teams) and a one-hour in-class final.

Federal Tax Clinic II
The purpose of the Federal Tax Clinic is to educate the student in the practice and procedures of federal tax
law and dispute resolution before the Internal Revenue Service (IRS) and the United States Tax Court.
Federal Tax Clinic II affords students from the tax clinic the opportunity to carry their cases through to
completion. It is more independent and sophisticated than tax clinic I. Students continue to develop the
skills that they learned in tax clinic I, including client interviewing, negotiations, tax litigation,
correspondence with the IRS, and preparation of petitions to Tax Court. Federal Income Tax and Tax Clinic I
are prerequisites.

This is a Skills and Live Client Experience course.

The Art of the Presentation
Lawyers are always giving presentations, both formally and informally. From interviewing to meeting with
senior attorneys to engaging with clients to advocating for one's client in court, it's essential for a new
lawyer to know how to speak confidently and persuasively. Students will learn how to become positive, clear,
and articulate speakers and presenters. Topics include: how to create excellent formal presentation's
summarizing one's work, how to engage others in the networking and interviewing processes, how to handle
difficult conversations in the workplace, how to understand one's role and add value during formal and
informal meetings, and how to be eloquent and efficient while conveying information to attorneys, clients,

Federal Courts
This course builds on the knowledge gained in constitutional law and civil procedure. One of the most
important features of our constitutional system is the general division of governmental authority between
state and national governments, and nowhere is that division of authority more important to practicing
lawyers than in the allocation of judicial power between the state and federal courts. The former are, of
course, courts of general jurisdiction, while the latter are courts of limited jurisdiction. The overall
design of the course seeks to assist students in thinking about this allocation of power, not as a merely
theoretical matter, but as one of real practical consequence in connection with a client¿s substantive goals
and how best to serve them. Litigants typically want access to the federal courts for very specific (and
often very important) reasons: to obtain remedies for violations of federal constitutional and statutory law,
or, in some cases, to secure a forum that they believe will be more hospitable to their claims. Seen in this

Each year, students are selected to travel to London for about two weeks between semesters. In London,
students engage in a number of activities focusing on the British legal professions, the system of advocacy
in the U.K., and legal history. For students who hope to be selected for the program, completion of Evidence
is recommended. Applications for the program are due each April and the program faculty selects the
participants for the following year. There are always far more applicants to the program than available
space.

This course is the second credit of a two-credit ungraded program.   To prepare for the visit to London,
students are required to take ¿Introduction to the English Legal Profession¿ (1 credit) during the fall

Media Law
This course will teach students the fundamentals of traditional media law with a particular focus on the
intersection between injury law and constitutional speech and press protections. This area of study poses
intriguing questions about the American balance between the rights of individuals to protect their reputation
and privacy and the rights of those who speak via media ¿ whether traditional mainstream news reporters or
citizens using social media platforms such as Facebook or Google Glass. In the words of former New Republic
counsel Scott Gant, ¿we¿re all journalists now.¿ As a result, it is almost inevitable that even lawyers
whose practice does not focus on media will confront questions about rights and liabilities arising from
client speech. In addition to discussing defamation and privacy doctrine, we will cover statutory regimes
that apply to public speech, such as the privilege to protect sources and rights of access to government
institutions and documents, and consider whether and how those statutes apply to both old and new media

Contract Drafting
This course will teach the fundamentals of drafting precise and clear contracts. Drafting concepts will be
taught through assigned readings, lectures, in-class exercises, hands-on drafting in pairs and alone, and
review of, and comments to, an individual's work and the work of others. The majority of the semester will
be devoted to drafting without the use of forms or precedent documents. For the first several weeks of
class, students will draft the components of a contract, each component being either peer-reviewed or
reviewed by the instructor. The components will be revised according to the comments received and integrated
into a complete contract. The individual drafting will be supported by independent in-class exercises and
review of the assigned reading and relevant cases. The final project will simulate a real-world drafting
experience in which students will receive precedent documents, term sheets, emails, relevant statutes, and
due diligence and will be required to prepare the first draft of the operative document for a transaction.

natural gas and coal converted to consumer products such as electricity and gasoline. Newer sources include
nuclear and solar energy. Each source and delivery system has its own network of property rules and contract
relationships. National energy policy will be reviewed and the impact of interregional competition on the
regulation of energy will be studied, as will constitutional and economic concepts affecting the pricing of
energy. Particular emphasis will be placed on energy issues in environmental law.

Advising Not For Profit Organizations in Real Estate and Business Trans Settings
This course will explore the opportunities and challenges for lawyers involved with not-for-profit
organizations, whether as paid or pro bono legal advisors, or as board members or volunteers. The course will
be centered around a recurrent series of fictional clients, each a not-for-profit organization, engaged in a
variety of operational and transactional situations. Each client organization will have a different mission,
size, and resources, as well as mock client representatives who will have different business and style
preferences, which the class will need to accommodate and will come to anticipate in fashioning and
recommending solutions for each client. There will be a particular emphasis on transactions and involving
ownership, leasing, use, and operation of real estate, which (just as with many for-profit businesses) is
typically the largest single category of capital investment and the second largest category of repeat expense
(after total personnel costs) for many not-for-profit organizations. The course will also consider issues of

Anatomy of a Deal
This weekend course will provide an introduction to the essential skill set you will need as an entry-level
M&A deal lawyer. This is increasingly important, in light of growing client unwillingness to pay junior
associate rates for attorneys to learn on the job. Facing an ever more competitive recruiting environment, it
will be crucial for you to come out of the gate armed with the appropriate skill set for your chosen practice
area. This course is designed to prepare you to speak intelligently in interviews and hit the ground running
on the job. To this end, the focus of the class will be the basics of a typical M&A transaction, including
how to perform due diligence and how to review and draft resolutions, share purchase agreements, third-party
opinion letters, and other closing documents commonly assigned to junior associates. You will also study
sample form agreements that appear in many different types of deals, including share purchase agreements,
debt documents, confidentiality agreements and escrow agreements. When appropriate, we may invite guest

The management of large international patent portfolios (comprising patent applications filed in several
jurisdictions), and an understanding of law and treaties affecting those portfolios, is fundamental to
international patent practice. We will discuss the basics of filing and prosecuting patents under the Patent

will also consider other multinational patent treaties commonly used in foreign patent application filings
that affect the management of international patent portfolios and US patents. We will take a comparative look
at several aspects of U.S. and foreign patent laws, and will consider current controversies surrounding
patents in the international arenae.g., regarding access to medicines and the patentability of business
methods and other controversial subject matter. Patent Law is a prerequisite. This requirement can be waived

Search and Seizure: 4th Amendment Law and Practice in Illinois
A practical skills course on 4th Amendment/Search & Seizure law as it applies in Illinois, and how the most common issues are litigated in criminal cases. The class explores applicable Illinois statutes, Illinois Supreme Court rules, and federal and state case law that sets forth the prevailing legal basis for individuals' rights against unreasonable search and seizure. Taught by a Cook County Assistant State's Attorney and with question and answer sessions with a defense attorney and law enforcement; the course takes a balanced look at both the prosecution and defense approaches to Motions to Quash and Suppress, the bread and butter of pretrial litigation and the chief avenue for deciding 4th Amendment issues. After learning the legal basics, students will be tested on their ability to identify and analyze Search & Seizure issues in various scenarios and argue for or against 4th Amendment violations, as well as, practice some basic motion writing and oral arguments.

Electronic Discovery and Problem Solving
 Electronic discovery (""e-discovery"") is the practice of working with digital evidence during legal
proceedings. It is at the intersection of law and such information technology disciplines as computer
forensics, information governance, data analytics, machine and rule based learning, and artificial
intelligence (and so that we do not scare anyone away, we expect that most students will have little
experience with these concepts).

Proficiency in e-discovery has become a must-have skill set for litigators. The Federal Rules of Civil
Procedure and Evidence have already been modified multiple times in the last few years to try to address
e-discovery concerns, and additional changes are under review by the drafters. The states have followed suit
with their own rules. A burgeoning body of case law comes down each year, attempting to define the legal and

History of the Federal Judiciary
 People use the expression ""trial and error"" in reference to a continual experiment yielding both positive
and negative results. Yet, it is all but forgotten that the federal courts developed in precisely this manner
at the hands of many successive (and sometimes shortsighted) Congresses. Since 1789, Congress has tinkered
with every conceivable detail pertaining to the Third Branch, from the important (such as defining federal
jurisdiction) to the trivial (such as micromanaging times for holding court). Some of these efforts were
short-lived, while others have persisted since the first Judiciary Act of 1789 and today constitute
cornerstones of the modern federal judiciary. With that pedigree in mind, this course will examine certain
aspects of the evolution of the federal courts from 1789 to the present, with particular emhasis on the
structure and function of current, abolished and reconstituted Article III (i.e., constitutional) courts,
federal judicial legislation, the federal judiciary, specialized Article III courts, the advent of Article I

Practice Fundamentals: Interviewing Skills
 Some of the most common complaints about lawyers stem from a single fundamental truth: we are trained to talk, but we are not trained to listen. Clients tell us frankly that we ""have poor listening skills,"" and further that we ""don't genuinely care about them or their case,"" that we ""think we know everything"" and ""nitpick every word they say.""[1] Other client frustrations, such as ""not communicating clearly,"" ""not keeping [them] informed,"" and ""kill[ing deals]""[2] are superficially unrelated to our listening skills, but at bottom reflect a failure to appreciate the client's point of view. In short, all lawyers need to know how to elicit and contextualize information from those they represent in order to represent them well. While interviewing is crucial to client relationships, its value does not end there. Young attorneys juggle many audiences in a day. These include assigning partners or department supervisors and those encountered in the course of doing the legwork that is a beginner's bread and butter: opposing counsel and their staff, or

 In this digital, global age, how does modern banking and finance work so that payments can be made, funds transferred, and money borrowed? What is the law governing your credit or debit card, phone ""apps"" for point-of-sale payments, ATM machines, direct deposits into your bank account, promissory notes and checks, wire transfers, letters of credit, and more methods for moving funds? Modern payment systems exist within an evolving scheme of banking and finance. They depend on networks of laws, regulations, customs, and agreements that balance the speed of transferring funds domestically and internationally against the risks of error and fraud. As such, they pose provocative questions of consumer protection and national security. They have adapted older methods of banking and payment to the computer revolution. But, they have gone beyond traditional practices to create new ways for funds to be moved locally, nationally, and around the world. This class allows you to master the law governing these and older systems to effectively advise clients. It

Mediation Certification & Courthouse Practicum
Students in this course will be trained to become certified mediators and then develop their mediation skills through hands-on experience mediating in court. The course starts with a mandatory intensive mediation skills training conducted by the Center for Conflict Resolution (CCR) at the beginning of the semester. The course will thereafter meet once a week as part of CCR¿s certification process to discuss, practice and improve upon student mediation skills. Students who meet all of CCR's certification requirements will be certified as CCR volunteer mediators and mediate actual cases in Cook County courts, while continuing to meet in class to discuss and build on what they learn in the mediations. Upon completion of this course and the CCR certification process, students will be able to continue volunteering as mediators for CCR, as long as they continue to meet CCR's volunteer requirements. Lawyering the Purchase and Sale of Commercial Property
 This is an advanced seminar intended to give students a working familiarity with the anatomy of a commercial
real estate sale, using a case study and typical documents, and provide a real world introduction, from a
practitioner's perspective, to: (1) the substantive law that applies to commercial real estate (and mortgage
financing); (2) the business objectives of buyers and sellers as they analyze and negotiate purchase
documents, conduct due diligence (survey, title and environmental, etc.) and negotiate mortgage loans; and
(3) the mechanics of closing the deal. The course will focus on Illinois law, but the instructor will point
out points on which state law may differ, and how that might affect the deal terms. The ""text"" for the
course consists of a portfolio of legal documents (letter of intent, purchase agreement, brokers agreement,
title report, survey, mortgage documents and all closing documents - deeds, assignments, affidavits, escrow
instructions, etc.). In addition to the actual documents, course reading materials will include excerpts

Legal Issues in Student Discipline
The legal issues surrounding student discipline in public elementary and secondary schools involve the
intersection of Constitutional and statutory law with the administrative hearing process. By developing a
working knowledge of the school disciplinary process, course participants will build analytical and
substantive skills applicable to a wide variety of practice areas.

The course will address the Constitutional implications of student discipline and the statutory provisions
governing student discipline and the administrative hearing process. Students will learn about `zero
tolerance¿ policies, the role that school discipline plays in the `school-to-prison pipeline,¿ and the
discriminatory impact of school discipline policies. Issues relating to discipline in charter schools and
discipline of students with disabilities will also be addressed. Other topics to be discussed include

In this course, we will explore legal and policy questions centered on how society should respond to
children, adolescents and youth adults who commit crimes. To what degree should developmental differences
between youth and adults be reflected in law and policy? Are legislators or individual judges in the best
position to decide how to meet the needs of youthful offenders while at the same time protecting the
interests of victims and the larger community? What responsibility do parents and communities bear in
providing children and opportunity to change their behavior? How should the justice system interact with

 In the last decade, children have become ""the newest kids on the human rights block."" This seminar
examines new laws and treaties developed to respond to age-old problems faced by children around the world.
The course begins with a study of the U.N. Convention on the Rights of the Child, the most rapidly and widely
accepted human rights document in the history of international law. It then examines ways in which these laws
are being implemented, including a review of child and family law cases decided by the European Court of

Mediation is an alternative to litigation which enables disputing parties to negotiate their own agreed
settlement. It involves an impartial third party neutral, the mediator, who assists disputing parties in this
alternative dispute resolution (ADR) process. This course will offer an overview of mediation techniques,
applications, and history. Through simulations and other in-class exercises, students will consider how
mediation differs from other types of ADR processes, how mediation styles and models differ from one another,
and how the role of the attorney-advocate changes during mediation. This course will be conducted in an

This mediation course allows students to mediate family cases through several community projects. Students
are required to have participated in some type of 40-hour mediation training in order to register for this
course. These students receive additional training in family mediation, co-mediation and related issues.
Students mediate in family group conferences and other multiple party mediations. Students participate in
multiple simulation and mediations and receive feedback on their skills. The course meets once a week for the
two hours for most of the semester, however students are also required to mediate at other times during the
semester. There is no examination. Grading is based on participation in mediations, simulations and
discussions and self-evaluations. Students may take the course for 1 or 2 credits. For 2 credits, a paper on
mediation theory or practice is required. Where the student is taking the course for 2 credits, the research

Current Issues in Children's Law Seminar
This interdisciplinary seminar is designed to give students an opportunity to engage in an in-depth
exploration of current and emerging issues in children's law. The seminar will focus on the legal
implications of current child welfare policy and practice, ongoing efforts at child welfare and juvenile
justice reform through state and federal initiatives, the use of empirical research in guiding child welfare
and juvenile justice initiatives, and long term implications for families and children. Specific topics
include, among others, an introduction to the concept of therapeutic jurisprudence, advocacy for children in
the child welfare and juvenile justice systems, the role of race and class in permanency planning for
children, the legal and ethical implications of privatized child welfare services, and ancillary domestic
relations issues that often arise within child welfare.

Introduction to the Study of Law and Legal Systems
This required foundational course introduces students to the sources and functions of law in our society.
The course begins with an explanation of the structure and traditions of the American court system. Students
then lean to read and analyze cases and statutes and develop basic legal written and oral presentation
skills. The course uses child and family law cases and problems and provides students with the background
they will need for future children's law and policy studies.

Introduction to Children's Law , Policy and Practice
Prerequisite: Introduction to the Study of Law and Legal Systems

This required course is designed to give students an introductory overview of the law as it affects children.
 It begins with a discussion of the constitutional relationship among children, parents and the state, as
well as the respective roles of the federal and state governments in the regulation of children and families.
 The course then introduces students to the principal areas of civil and criminal law that affect children
and families.   With this baseline of understanding, students can choose elective courses that provide a more
in-depth study of a particular topic (e.g. education law, child welfare, etc.)

Children's Health Law and Policy
The purpose of this course is to teach interested students the application of law to critical public health issues that affect children and youth. Students will first learn basic principles of public health including the distinction between health promotion, disease prevention, and health protection. Next, the course will address the constitutional and statutory foundation of public health law, how legislative and regulatory decisions must negotiate the balance between individual rights and public good, and how the principles of parens patriae and state police powers affect child health. Cases studies in the areas of obesity, reproductive health rights of minors, mandatory school immunizations, student drug testing, and violence prevention will illustrate the application of public health jurisprudence from the national to the state levels.

ChildLaw MJ Independent Study
The student will be engaged in research and in initiating the development of a curriculum targeted to a teen audience that educates teens about local and federal laws that have an impact on their lives as adolescents, including juvenile justice issues, mental health laws, custody issues, drinking and driving. The student has been working with adolescents on psychological issues as part of her field placement for the Masters of Social Work degree. This course will allow her to broaden that focus to include legal considerations that play an important role in helping teens who will soon be emancipated and facing lives as adults.
 The first part of the course will require the student to identify the specific issues and laws that will be included in the curriculum and to explore resources, both in law journals and in interviews with teaching faculty, that will inform her presentation of the issues. The second part of the course will be devoted to developing the format for the curriculum that will be most effective in reaching this media savvy audience.

Restorative Justice
This course begins with an intensive in-person weekend retreat where students will build relationships with
each other and, through experiential exercises and lively discussion, internalize core principles. Throughout
the retreat and course, students compare and contrast restorative and retributive justice models, practice
proactive and responsive restorative techniques, and identify personal and professional shifts to exemplify a
restorative mindset. Specific restorative techniques which students will learn include restorative language,
facilitation of a variety of types of circles, restorative dialogue processes, and systems and structures to
accommodate restorative practice within school life. Through additional seminars, students will strengthen
their knowledge of the history, theory, research, and practice of restorative justice. The culminating focus

School Discipline Reform: Linking Law, Policy and Practice
 This course will serve as the capstone for the certificate. It will examine in-depth three to four major
themes in the field of school discipline from the perspectives of law, policy and practice. The focus will
be on analyzing ""best practice"" examples as a means to address the challenges relating to fundamental
reform of school discipline practices. Potential themes to be addressed include: (1) racial inequities in
school discipline; (2) the interlinkages between special education and school discipline; (3) the
relationship between the school and the juvenile/criminal justice system; and (4) professional development to
support teachers and other school stakeholders. As part of this course, participants will develop an action
plan for school discipline reform in their respective settings. They will determine how potential system-wide
barriers will be addressed (e.g., resources for teaming, support for MTSS planning, implementation and
evaluation, teaming, leadership/administrative support, teacher buy-in and support, community engagement).

Introduction to Legislative and Policy Advocacy
The purpose of this course is to provide tools and strategies for students interested in learning the
techniques for effective advocacy at the state and federal levels. The first portion of the course will
provide historical context on the three branches of governments¿ ability to make policy. The course will then
examine the processes that turn a problem into a legislative solution, including how to move a bill into
law. The These tools include identifying an issue, conducting national surveys, building a base through
community organizing, drafting, lobbying, and offering testimony in committee. A recurring theme in the
course is the need to examine external obstacles that impact policy making. Students will also learn how to

Health Law: Patients and Populations
This course provides a broad survey of the most fundamental legal issues surrounding the delivery of health
care in America. No prior knowledge of health law is required. Major topics include state and federal
regulation of health care providers and institutions; tort liability in the context of medical care; patient
and provider rights and obligations; public and private insurance systems; and basic issues in boethics and
public health. By the end of this course, students should understand both the current state of American
health law, and the social forces that have shaped its historical development.

Bioethics, Law & Policy
This course provides an overview of American law as it relates to emerging ethical issues in medicine and
health care. It is intended to give students an appreciation of the ways in which medical practice and
decision-making are guided by modern American principles of constitutional, tort, administrative, and
criminal law.   Students will learn how the law's regulatory powers have been used to set boundaries in
medicine, and, in turn, how theories of medical ethics and practice have informed modern legal developments.
Topics covered vary from year to year, but may include issues in end-of-life care, research ethics,
reproductive autonomy, distributive justice, and genetic technology.

Health Care Payment and Policy is a course which focuses on the roles of payers, purchasers, providers and consumers in the shifting arena of health care coverage. Throughout the course, we will consider the Affordable Care Act and the regulations implemented over the past decade to implement that law and set in motion the health care industry¿s move to value-based care. The first part of the course will explore the development of health insurance, the growth of managed care models and the role of employers in shaping health benefits. The second portion of the course will explore the evolution of Medicare and Medicaid. The final portion of the course will consider the ongoing transition to value-based care payment and delivery models. This will include an evaluation of new payment models such as Accountable Care Organizations and Patient Centered Medical Homes. Students will also examine value-based strategies that drive better quality outcomes, enhance patient experiences and lower health care costs, including those needed to improve health

Topics in Long Term Care
Provides students with an overview of key legal and policy issues in the diverse and growing field of long
term care. In the context of the seminar long term care will be cast broadly as an area that deals with
diverse populations that have profound and ongoing health/social needs including disabled populations and the
elderly. While much of the course will focus on statutory and regulatory law, significant emphasis will be
placed on evolving public policies in long term care that impact programmatic developments in quality
assurance ,insurance coverage and the regulation of institutional and community actors. Specific areas of
focus will be selected for each term for review and analyses including diseases of aging, prevention of abuse
and neglect, uses of telehealth, senior housing policy and end of life care. Materials from the United
States, Canada, the EU and Japan will be referenced. Students will be required to write two memoranda and
participate in a group project.

Health Care Compliance
This course is designed to expose law students to key legal concepts in the health care corporate compliance
and ethics fields, which may be broadly defined as the application of internal corporate initiatives to
ensure compliance with applicable federal and state laws and regulations. Health care is a highly regulated
industry, and a health care attorney must have a broad understanding of compliance issues. Through readings
and class discussion on common health law topics such as the Anti-kickback Statute, the Stark law, the False
Claims Act and its whistleblower provisions, students will develop an understanding of the need for and the
role of the Compliance Officer in a health care institution. Students also will begin to explore recent
movement toward more broadly-based organizational integrity and ethics programs. Underlying course themes
will include how to structure an effective compliance program and the role of government enforcement in
controlling health care costs.

Health Law Colloquium
This a unique course offered once a year to a select group of students from Loyola and DePaul. Enrolled
students read and discuss draft articles of nationally renowned professors in the field of health law. They
must also write a three page memo (double spaced) with comments on the article that will be useful to the
professor. The articles are typically draft law review articles. The discussions are focused on helping the
professors to refine and improve their articles, such that a strong foundation of health law is expected,
even though there is no official pre-requisite. This course meets every week, but the students only meet in
person roughly half the time, with the other half of the sessions done by videoconference. Three of the
in-person classes will be at DePaul and the other three in-person classes will be a Loyola. Please be sure
that your schedule allows you to arrive at either law school by 4 p.m. There is no final exam or research
project required for this class. Instead, students are required to attend and actively participate in all

Business Law Center Clinical & Seminar
 The Business Law Clinic (the ""BLC"") is a live client transactional legal clinic that represents for profit
and not for profit businesses in the Chicagoland area. Student clinicians work with several BLC clients
during the course of a semester. All work is overseen by BLC faculty. In addition to client work, the BLC
includes a weekly seminar (Wednesday from 3:00 to 4:50 p.m.), which covers relevant substantive law, ethical
issues and pragmatic lawyering skills, such as drafting, negotiating and client counseling. The work in the
BLC is completely transactional in nature. The BLC does not handle contested matters or complex tax.
Participation in the BLC requires a significant time commitment (a minimum of 3 hours per week per credit
hour, in addition to the seminar), and a degree of flexibility in the student's schedule. All student
clinicians are expected to communicate with their clients regularly, meet with their clients as needed,

Principles of Competition Law
This is a required foundational course to introduce the on-line student to the key concepts that underlie
competition law as it exists throughout the world. The concepts that the students study here will be
examined in greater detail throughout the rest of the curriculum. This course will begin the process of
creating a common foundation of knowledge of the law and economics of competition by the conclusion of the
program.
The course will begin with the goals and history of competition law and its spread from the United States and
a handful of developed market economics to over one hundred twenty jurisdictions in today¿s global economy.
The common features of competition law in all these diverse systems will be examined including 1) so-called
horizontal agreements between competitors, 2) so-called vertical agreements between suppliers, manufacturers,

experiences in the United States and Europe, we will discuss and compare many jurisdictions around the world
and the challenge of applying multiple merger laws to the same merger. We will start by distinguishing
mergers from other types of business conduct which implicate antitrust and competition laws and address the
question of why mergers are treated differently. The course will then address basic principles used in the
substantive review of mergers. We will start by identifying the economic rationale supporting the
prohibition of mergers and the basic economic theories used to distinguish permissible mergers from
impermissible mergers. We will then ask whether these theories apply across jurisdictions.
We also will devote several sessions to the procedural context of merger review. We will discuss the basic

This course exposes students to seven unique and emerging issues impacting the health care industry. Each
issue has the potential to impact providers, health care organizations, health care attorneys, and consumers.
Each emerging issue is selected based on its likely impact on the industry and its timeliness, given current
political and health care challenges. This course is structured over 14 weeks, in which we alternate between
reading weeks, where students are given reading material to introduce them to each issue, and synchronous
classroom lectures by national experts on each subject. At the end of the course, each student is asked to
write a reflective paper on one of the issues presented and describe the impact that they believe it will
have on their practice or the delivery of health care in general. This course is graded pass/fail. THIS CLASS

Antitrust Law
This course will provide an overview of the antitrust laws and will illustrate the antitrust issues that face
businesses on a daily basis. The antitrust enforcement authorities believe that preserving competition
provides the best mechanism for allocating economic resources, and that preventing unreasonable restraints of
trade will benefit consumers by yielding high-quality, low priced goods and services and result in greater
innovation. We will examine the value of competitive markets and the role antitrust law plays in addressing
problems posed by mergers and acquisitions, joint ventures, monopolies, and other competitive collaborations
across a wide variety of industries (including various aspects of the health care industry). We will also
assess the antitrust implications of certain contracting practices such as exclusive dealing, non-compete
clauses, and the impact of various other strategic business decisions. The subject matter is organized

country with a culture and a legal tradition different from the culture and legal system in which they
received their education. The course will examine and compare the main elements of particular relevance to
rule of law assistance work in major world legal traditions: common law, civil law, Islamic law, customary

History, Theory and Practice of Law for Development
This course provides an overview of the main intellectual foundations supporting the view that law and
development are linked. While this connection may appear obvious, the course seeks to show that the
relationship may not be as straightforward as first impressions might lead one to believe. Indeed, proponents
of the presumed relation between law and development must confront two important distinctions well known to
social scientists: causation versus correlation. Evidence that societies, which have achieved high levels of
development, typically have good legal systems is incontrovertible. What is less clear is how they got where
they are and in what sequence. Put differently, do good laws and institutions generate good development
outcomes or does development lead to good laws and institutions? The course applies interdisciplinary and
comparative research in history, economics, sociology, political science, regulatory theory, and philosophy
to questions of law and the development of legal institutions and does not assume any prior knowledge in any

Theory and Practice of Assessments in Rule of Law Advising
This course will provide students with the knowledge and skills required to undertake assessments, the
crucial lynchpin which supports the design of specific policies, legal and regulatory reforms and
administrative actions. The course demonstrates how developing a clear understanding of problems facing a
society is fundamental to good governance and the rule of law. The course assumes that such understanding can
be facilitated through professionally prepared assessments which identify the root causes of problems facing
a country in a given area and put forward options for remedial action. Students will learn how to use the
rich body of documented experience and guidance available on structuring and preparing assessments by
learning how to plan and carry out assessments linked, for instance, to justice sector reform, access to
justice, the improvement of the legal framework for investment and sustainable business and the control of
human trafficking.

International Development Architecture
This course covers the rule of law and governance dimensions to international development assistance. It
examines both the institutional frameworks and legal mechanisms by which international development assistance
is distributed for rule of law and state-building activities and the legal and regulatory structures that
apply to development assistance. The course begins by considering the reasons that donors provide aid
generally and for rule of law, followed by the examination of the normative frameworks and standards that
shape the manner in which aid is distributed, institutions and actors, mechanisms by which aid is programmed
and actual use of aid by recipients. The overall approach begins at the global level and follows the chain of
development aid through its various elements down to the national level. A key theme of the course is that
the approach to international development assistance is broadening. Historically, financing for development
was understood primarily in terms of public sector resources. As a result of a confluence of factors,

Health Care Outcomes
This course focuses on the theory and methods to measure and evaluate healthcare outcomes. Concepts of
population health will guide the comparison and analysis of health outcomes and measures. Current political,
legal, regulatory, and ethical issues will be explored as these relate to health outcomes. Interprofessional
teamwork, the use of information technology and data are emphasized in promoting safer healthcare and
improved outcomes.

Outcomes: Upon successful completion of the course, the student will be able to: 1. Analyze the political,
legal, regulatory, and ethical influences in the development and current status of outcomes management. 2.
Apply methods and processes for improving outcomes. 3. Utilize data-driven decision making for health
outcomes. 4. Develop leadership and interprofessional competence in analyzing healthcare outcomes. 5.

Program Planning and Marketing in Health Care
This course presents an integrated approach to strategic planning, program planning, and marketing in nursing
and health care organizations. Key models, elements and processes associated with strategic planning are
presented with an emphasis on the leadership role in leveraging information, environmental scanning, and
competitive analysis. Theories, models, tools, and processes for program planning, implementation, and
evaluation and the marketing of nursing and healthcare services are addressed. The integration of strategic
planning, program planning, and marketing with the mission, goals, and objectives of organizations and
services is emphasized.

Outcomes: Upon successful completion of this course, the student will be able to: 1. Analyze models and
theories of strategic planning, program planning, and marketing. 2. Explain the relation between organization

Health Care Policy
This course is designed to introduce key policy issues and processes in public policy development. The impact
of health care policy on management and health system improvement is discussed. The student is provided with
advanced policy knowledge, frameworks, and skills required to assume a leadership role in health care.
Emphasis is placed on using evidence to develop an understanding of the effect of health care policy on
practice.

Outcomes: 1. Identify key policy issues in contemporary health systems. 2. Analyze the effect of health
policy on practice. 3. Analyze strategies for health system improvement through public policy. 4. Advocate
for policy adoption to a health care decision maker. 5. Identify the effects of government regulation on
education and practice.

Fiscal Management in Health Care Organizations
This course prepares the graduate student to develop a framework for understanding key issues in financial
management in health care from two perspectives. First, the course explores the relationship between the
national economic environment and the financial context for current models of health care delivery. Second
the course introduces a variety of fiscal concepts and techniques as applied to nursing and healthcare
administration. Emphasis is placed on the way cost data influences operational decision making in healthcare
administrative practice.

Outcomes: Upon successful completion of the course, the student will: 1) Analyze the impact of political,
social and economic factors on the cost of patient care delivery. 2) Examine cost behavior concepts as they
relate to nursing and other health care models in healthcare organizations.   3) Apply cost accounting

Comparative Effective Research in Healthcare
Prerequisites: GNUR 450 or equivalent required. CMAN 439 and 440 recommended.

Comparative effective research (CER) is a central tenet of health care reform. This course offers an overview
of policy implications and rationale for CER and explores different approaches of developing, analyzing and
communicating CER. Research comparing the clinical and economic merits of different treatments, devices and
procedures will be explored.

Outcomes: Apply political, social and ethical perspectives to uses of CER, Demonstrate effective retrieval of
CER reviews from public sources, Demonstrate knowledge of major CER methods and tools, Evaluate quality of
evidence from CER reports, Assess treatment options in defined patient population.

DNP Scholarly Project: Project Implementation
The DNP Scholarly Project demonstrates an in-depth knowledge of the student¿s area of expertise in nursing
practice. The DNP Scholarly Project is a synthesis of the student¿s work which provides a faculty-supervised
opportunity for demonstration of the use of evidence to improve either practice or patient outcomes. The
project forms the basis for future practice scholarship. This course combines 1 SH of didactic and scheduled
on-line seminars throughout the semester with 1 SH (75 clock hours) of practicum experience. Project
implementation is the focus of the practicum experience. Project management guidance is provided through
on-line seminar sessions, in concert with Faculty Directors, and through communication with the student and
external mentor. Students are expected to have a DNP Scholarly Project faculty director, an external member
and an approved and willing project site in place prior to course entry.

Applications of Human Centered Design Principles
Human-centered design places humans and their needs at the center of the design, compels us to take a
holistic/thoughtful approach to our designs. This course uses these principles to examine the design process
to create learning experiences that are inclusive and responsive. Learners will also craft their own design
philosophy.

Pre-requisite or co-requisite: CIEP 470 Principles of Instructional Design

Outcomes: Describe principles of human-centered design. Create a space for learning that incorporates
principles of human-centered design. Critique the application and use of these principles. Formulate your own
philosophy of design.

Neurodevelopment and Trauma
This course is an advanced concentration year practice elective focused on assessing the neurodevelopmental
impact of trauma and selecting interventions consistent with this assessment. Students will learn to identify
major regions of the brain, appreciate the sequential nature of brain development, and determine which areas
of the brain have likely been affected by developmental trauma. Consistent with a neurosequential
understanding of development, students will be taught to recognize which interventions involve specific brain
regions in order to assist them in choosing those most likely to promote growth in areas of the brain
impacted by trauma. This assessment and intervention process occurs within the frameworks of systems and
attachment theories, which recognize that the relational environments and communities in which clients live
must be adequately safe and supportive for any intervention to be effective. This course is a hybrid course,
incorporating recorded material supplied by The Child Trauma Academy. By the end of the course, students
