**DSCI 101 Fundamentals of Modern Data Science with R (3 Credit Hours)**
This course is designed to be an introduction to the basics of data science with R. Students will learn the very basics of data science and introductory programming skills for working with data.

*Outcomes:*
Students will learn basic programming skills for working with different types of data as well as data visualization, data wrangling, and data management practices.

**DSCI 401 Introduction to Data Science (4 Credit Hours)**
This course provides students with an introduction to data science using the R programming language covering such topics as data wrangling, data visualization, interacting with databases, principles of reproducible research, building simple statistical models/machine learning and data science ethics. Pre-requisites: Restricted to Graduate students.

*Outcomes:*
Students will obtain an extensive background in the basic tools used in the field.

**DSCI 470 Data Science Consulting (2 Credit Hours)**
Students will work on a research project with a client acting as a consultant on the statistical and computational aspects of the project. Students are required to meet with a client, develop a strategy for addressing their problem, and present their results to the client (and their classmates). Pre-requisites: STAT 408

*Outcomes:*
Students will apply methods learned in prior classes to address a real-world problem, gain oral and written presentation skills, and improve collaboration skills.

**DSCI 494 Data Science Research Design (2 Credit Hours)**
Research practices, including data collection and management, the experimental design process, and tools for critical analysis and preparation of scientific literature will be discussed. Restricted to DSCI Graduate students.

*Outcomes:*
Students can describe and implement research design practices in data science.

**DSCI 499 Data Science Research (1-8 Credit Hours)**
Students will conduct independent hypothesis-driven data science research under faculty guidance. Research efforts will include literature surveys, research design, algorithm and software development, and data analysis. Restricted to DSCI Graduate students.

*Outcomes:*
Students can develop and utilize techniques for data science research.

**DSCI 595 Thesis Supervision (1 Credit Hour)**
Research under faculty guidance including training in scientific writing and the production of a thesis and research presentation. Pre-requisites: DSCI 499 At the conclusion, students will present (written and oral) the results of their research.

*Outcomes:*
Students will develop skills in scientific writing and presentation.
