This is a sample program plan based on a Fall semester start. All students will work with their program director to create their program plan prior to starting the program.

Clinical Requirements

All our practicums are designed by faculty members, who will help you secure your clinical site placements. Practicum experiences for the Nursing & Health Care Administration program can be completed in the student’s geographical area. The Nursing & Health Care Administration Practicum is six semester hours (each semester hour equals 56 clock hours).

Exam Requirements

All MSN students are required to complete a comprehensive exam to complete their degree.

Immersion Sessions

Loyola’s Nursing Health Care Administration MSN program is offered in a hybrid learning format that combines distance education with on-campus immersion sessions annually incorporating course work, seminars, and presentations.
Learning Outcomes

Program Goal
The goal of the Master of Science in Nursing (MSN) program is to prepare nurses at the master's level who use advanced knowledge and skills to assume a leadership role in interprofessional healthcare delivery to improve health outcomes at the system, population, or individual patient levels.

Program Outcomes
At the completion of the MSN program, the graduate has the knowledge and skills to:

- Integrate scientific findings from nursing, healthcare, and biopsychosocial fields; public health sciences; and the Jesuit Catholic tradition for the continual improvement of nursing and healthcare across diverse settings.

- Function as a leader emphasizing ethical and critical decision-making, effective working relationships, and application of organizational sciences in a systems perspective, to promote safe and high quality patient-centered care.

- Use translational science to integrate evidence into practice.

- Critically appraise healthcare technologies and information systems and incorporate data to promote optimal communication and healthcare delivery at the system and patient-care levels.

- Understand and appreciate the importance of health policies on health status and employ advocacy strategies to positively influence health care at the population level.

- As a leader or member of an interprofessional team, effectively communicate, collaborate, and consult with other health professionals to improve patient and population health outcomes.

- Working collaboratively with patients, families, and communities, utilize culturally sensitive evidence-based strategies for health promotion and disease prevention locally, nationally, and globally.

- Use expanded knowledge and change-agent skills for professional growth and the provision of indirect and direct care that enhances outcomes for individuals, populations, and systems.
