PHYSICS WITH COMPUTER SCIENCE (BS)

Physics is understood in terms of many mathematical relationships that are much easier to state than solve, and computer science has become a major part of many physicists' work to solve enormous problems. This major is preparation for graduate study in physics, applied physics, computer science, and especially in the burgeoning research field of computational physics, as well as in many branches of engineering. Employment opportunities are in the industries of R&D and manufacturing, research and teaching in academic institutions, and research in government and private laboratories.

Curriculum

This program is similar to the theoretical physics/applied mathematics option, except that some of the mathematics courses are replaced by computer science courses. A minimum grade of C- must be earned to satisfy a course requirement and a 2.0 minimum overall GPA is required for each major or minor. Final confirmation of degree requirements is subject to department, school, and university approval.

Suggested Sequence of Courses

The below sequence of courses is meant to be used as a suggested path for completing coursework. An individual student's completion of requirements depends on course offerings in a given term as well as the start term for a major or graduate study. Students should consult their advisor for assistance with course selection.

| Course | Title | Hours |
|-------------|--|-------|
| First Year | | |
| Fall | | |
| PHYS 121 | College Physics I Lec/Dis | 3 |
| PHYS 111L | College Physics Laboratory I | 1 |
| MATH 161 | Calculus I | 4 |
| COMP 141 | Introduction to Computing Tools and Techniques | 3 |
| UCWR 110 | Writing Responsibly | 3 |
| | Hours | 14 |
| Spring | | |
| PHYS 122 | College Physics II Lec/Dis | 3 |
| PHYS 112L | College Physics Lab II | 1 |
| PHYS 126F | Freshman Projects | 1 |
| MATH 162 | Calculus II | 4 |
| COMP 170 | Introduction to Object-Oriented | 3 |
| | Programming | |
| Core | | 3 |
| | Hours | 15 |
| Second Year | | |
| Fall | | |

| Core | | 3 |
| General Elective | | 1 |
| | Hours | 13 |
| | Total Hours | 121 |

1 Students can take MATH 264 in the spring semester of their second year, but it would be best taken before PHYS 301.

Students can take PHYS 303 Electronics I & PHYS 303L Electronics Laboratory in the fall semester of their fourth year.

Students can take PHYS 310 Optics & PHYS 310L Optics Lab in the spring semester of their fourth year.

College of Arts and Sciences Graduation Requirements

All Undergraduate students in the College of Arts and Sciences are required to take two Writing Intensive courses (6 credit hours) as well as complete a foreign language requirement at 102-level or higher (3 credit

hours) or a language competency test. More information can be found here (https://www.luc.edu/cas/college-requirements/).

Additional Undergraduate Graduation Requirements

All Undergraduate students are required to complete the University Core, at least one Engaged Learning course, and UNIV 101. SCPS students are not required to take UNIV 101. Nursing students in the Accelerated BSN program are not required to take core or UNIV 101. You can find more information in the University Requirements (https://catalog.luc.edu/undergraduate/university-requirements/) area.

Learning Outcomes

Interdisciplinary fields involving science and technology continuously change and present exciting challenges. If you are a student interested in these fields, then a degree in Physics with Computer Science may be just right for you.

Students who major with a degree in Physics with Computer Science at Loyola University Chicago are well equipped to enter the work force with the tools necessary to tackle problems involved in basic science, technology, or other related interdisciplinary field. In addition to the specific science background, students at Loyola are also prepared with a liberal arts education that emphasizes an understanding in humanities and social sciences.

The major in Physics with Computer Science at Loyola University Chicago prepares a student to graduate with a strong and basic foundation in physics, mathematics and computer science. Students take lectures and laboratory courses in physics that expose them to the fundamental principles of introductory, intermediate and advanced physics. From the computer science side, students take a number of introductory courses and then choose an array of 300-level courses that fulfill their specific interest in the area. In addition to the physics and computer science courses, students also take a series of mathematics courses.

This major can serve as preparation for graduate study in physics, applied physics, computer science, and some areas of engineering. It is especially useful for students interested in inter-disciplinary areas, such as: quantum computing, scientific computing, computational physics, intelligent systems, optics and optical communication, etc. Employment opportunities exist in industry, such as R&D and manufacturing, in academic institutions for research and teaching, and for research in government and private labs.

By completing the Physics with Computer Science degree, students will:

- · Acquire foundational knowledge in the physical sciences
- Possess an understanding of the mathematics needed to model and solve problems
- · Acquire specific knowledge in the computational sciences
- Gain an understanding and appreciation of interdisciplinary approach in the physical and computational sciences
